Eventually clowns in charge will have to acknowledge the genetic and/ or T cells effect causing some to be immune, asymptomatic or just a 'bit off' for a day or two. But until data on studies piles up, on we go.
Like all viruses it hits some walls, even gets damaged along way.

Antwort an @SilkCutBlue @Spud_Jimmy

Wish it was so. I now think it'll continue right through the winter until at least late March.

By or before then, we won't have a country.

This is only tangentially about a virus. I can't go there as it isn't science & I'm not in the police force.

Science must stop this now.

Mitchell Allen @amMitchellAllen · 12 Std.
Lamp: 'Multiplexing approaches for LAMP are less developed than for PCR. The larger number of primers per target in LAMP increases the likelihood of primer-primer interactions for multiplexed target sets.' Does this mean more false positives?

1 1 1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @amMitchellAllen

This I do know: when I read about LAMPore I knew we were in even more trouble that I'd imagined. Back in June or July, the expectation was the virus would complete its single pass through the population & either vanish or become endemic.
That test was superfluous. Why invest?

Please note & resolve to help.

If in nothing else, persuade one neighbour or friend each day. Send to contacts you believe will read it.

It may sound random, but it's the 'get lucky strategy' I've used successfully all my life.

Hard work gets lucky.

Hand sitting doesn't.

Tony Willk @TonyWillk · 16 Std.

None of what is happening makes sense, it may just appear to be incompetence but it's not, it's very deliberate.

Hancock gave a speech in 2017 about the 4th Industrial Revolution or as it now known the Great Reset.

This is preplanned and deliberate!

2 tweets out of 20-30 relate to Wales.

The rest is my personal experience & those of my courageous friend.

What's happened to "our NHS" is nothing short of scandalous. It's been run all year in ways it's founders wouldn't have stood for.

No point in asking me why, no idea.

I enjoyed your article on Lockdown Skeptics and agree with most of it. 2 points: the PCR test does not false positive because of other HCoVs (unless SARS1 if only testing for E gene). Don't dilute your good work with this myth! The Cepheid doc does not support this claim.

Antwort an @gadboit @CGreenUK

My friend who's a U.K. professor says he's checked all PCR tests on sale in U.K. and the TDS do indicate cross reactivity depending on the primer used.
I don't personally use the technique, but if it's not possible for any primer to do that, it cannot be in the TDS?

And my second point is more of a comment not intended as criticism. Second ripple is slower in terms of rate of change of new cases but time to peak is about the same depending more on incubation and infectious periods which are constant.

1 1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @gadboit @CGreenUK

I agree lower slope but similar time to peak. Would that time be around now?
We have been climbing steadily for many weeks & the spring peak seemed rapidly attained?

Here's an interesting review of that very field in that rather edgy journal, the BMJ.

9 105 515

bob67 @bob6720916293 · 16 Std.
I have absolutely no expertise in this. But I thought the fear of 2nd & 3rd waves came from comparison with the 1918 flu pandemic which did report 2nd & 3rd waves. Or was that misreporting?

1 3

Damian Mayo (FRCS) @BigBaldDr · 6 Std.
Second wave was significantly worse than the first. It also killed a lot of younger, fitter people than the first wave.

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @BigBaldDr @bob6720916293

We don't even know for sure how many infective organisms were involved
Also that's flu. It mutates relatively Quickly
SARS-CoV-2 is relatively stable so no source of waves there.

SARS also one wave

Spanish flu is 102y ago! We don't know much for sure.

Worst was they had no clinical or specifically cellular immunologist.

I'm the best they've got and this is one of several sub-specialities.

How did that happen?

lockdownsceptics.org/what-sage-got-…

I've previously shown that U.K. is over the herd immunity threshold. That's why London isn't experiencing 500 deaths per day from Covid19.

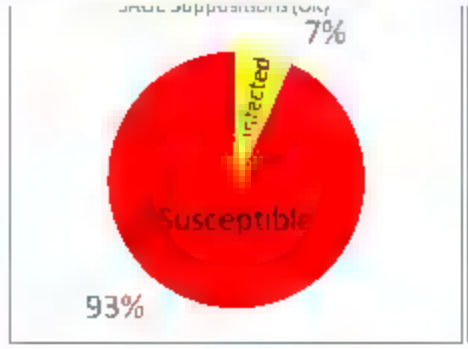

Chart 1:	Chart 2:
-no prior immunity -just 7% infected -93% susceptible remain ***FULL BLOWN PANDEMIC CONTINUES*** **Testable predictions:** • Very large number of additional deaths • Will resume in the capital • Will proceed at similar speed to spring Will continue **indefinitely**	-30% prior immunity -as many as 32% infected -28% susceptible remain ***PANDEMIC IS ESSENTIALLY OVER*** **Testable predictions:** • Smaller, regional outbreaks with far fewer deaths • Does not re-ignite in the capital • Grows much more slowly than in spring. Endemic equilibrium is **imminent**

Dr Yeadon has adjusted the size of the susceptible population in Chart 2 so it is between <30% and <40%

It's my very carefully considered opinion that THE PANDEMIC IS OVER.

Without seeming immodest, I doubt there is anyone else in U.K. who has studied the pandemic more closely & has all the knowledge, experience & judgement I have in all aspects relating to this ghastly episode.

01:17 - 23. Okt. 2020

In summer, I & others deduced a false positive rate in Pillar 2 of around 1%. Julia Hartley-Brewer forced Hancock to confess “it's just under 1%”, accounting for substantially all the “cases”.
Once you accept there is a FPR, don’t you need to know the %? It varies. It’s much...

...worse as number of tests per day soars, as all sample preparation is done MANUALLY, by underpaid & often inexperienced, recently hired staff.
I contend no more than that the FPR now is perhaps 5%. If so, then there ARE NO CASES.
Sure, people do get ill, get admitted with...

1

Yardley Yeadon @MichaelYeadon3 · 33 Sek.
...respiratory symptoms & sadly die. But there are NOT more such deaths than normal for October. There isn’t even “excess deaths” at all now. There was in spring.

I just learned today that there is such a thing as a “PCR false positive pseudo epidemic”

It's my very carefully considered opinion that THE PANDEMIC IS OVER.

Without seeming immodest, I doubt there is anyone else in U.K. who has studied the pandemic more closely & has all the knowledge, experience & judgement I have in all aspects relating to this ghastly episode.

1 4

I welcome any non hysterical responses & objective facts which refute this contention.

I'm not spending more time here now than needed to create a post. So I may not check replies for hours.

Thank you.

IF even most of what I'm saying is true, that there are now too few people who are susceptible to the virus, and that's why the virus has run out of steam. Herd immunity threshold attained etc.

So if it's over, why is it continuing?

ITS NOT OVER BECAUSE SAGE SAYS ITS NOT.

Does this remind you of anything at all?

We are in a FALSE POSITIVE PSEUDO EPIDEMIC, caused entirely by a fatally flawed PCR testing system.

I've never been more serious. This is what's happening.

ITS NOT OVER BECAUSE SAGE SAYS ITS NOT.

There's no other indication anywhere.

Indeed. There are, sadly, always ill people, people in hospital & deaths, around 1700 every day.

There are not, however, more people dying than is normal for October.

We are being badly served by SAGE, who are completely wrong about extent of prior cross-immunity & % infected.

> **Wokeman, I dislike destruction** @Wokeman8
> So 563 ppl are on ventilators "with covid". That is one person in 121,000, or 1 person ventilated in a population roughly the size of Ipswich. How can the NHS not cope exactly?

I don't know how Twitter decides who sees what. I do know that in recent days, odd things are happening to some tweets I've made. They often don't appear to family members, sometimes in the same house or elsewhere in U.K.
It's possible my account is somehow being restricted.

Does this ring any bells?

It's a now-classic 'PCR false positive pseudo epidemic'.

Different infectious organism (a gram-negative bacterium) & disease (whooping cough) but all the other features look familiar.

Chart 1:	Chart 2:
-no prior immunity -just 7% infected -93% susceptible remain ***FULL BLOWN PANDEMIC CONTINUES*** **Testable predictions:** • Very large number of additional deaths • Will resume in the capital • Will proceed at similar speed to spring Will continue **indefinitely**	-30% prior immunity -as many as 32% infected -28% susceptible remain ***PANDEMIC IS ESSENTIALLY OVER*** **Testable predictions:** • Smaller, regional outbreaks with far fewer deaths • Does not re-ignite in the capital • Grows much more slowly than in spring. Endemic equilibrium is **imminent**

Dr Yeadon has adjusted the size of the susceptible population in Chart 2 so it is between <30% and <40%

74 1,1 Tsd. 1,9 Tsd.

Andrew Lazarus, sheltered-at-home @AndrewLazarus4 · 15 Min.

Both daily cases and deaths are increasing. (You can't argue excess deaths are an artifact of testing.) This is literally impossible in a population over the herd immunity threshold. There's slowing of exponential growth from social distancing measures.

We must look closely at causes of deaths. While Covid19 deaths have def risen, other respiratory deaths have fallen. Also, excess deaths at home from non-Covid19 appear to exceed 2000 in Sept alone. It's complicated. See CEBM website.

occurred in hospital (n=32,275), the excess deaths are only 8,486 or 7% higher than expected.

The ONS similarly reports for the same week numbers of deaths in hospitals and care

Antwort an @TheEyeAndTheEar @AndrewLazarus4

Impossible to say, atm. Certainly consistent w reemergence of Covid19. But it's common for error rate to increase in a stressed testing system. Also, cross-reactivity with any other respiratory viruses would increase positivity. There's evidence of widespread, biased diagnoses.

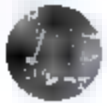
-no prior immunity -just 7% infected -93% susceptible remain ***FULL BLOWN PANDEMIC CONTINUES*** **Testable predictions:** • Very large number of additional deaths • Will resume in the capital • Will proceed at similar speed to spring Will continue **indefinitely**	-30% prior immunity -as many as 32% infected -28% susceptible remain ***PANDEMIC IS ESSENTIALLY OVER*** **Testable predictions:** • Smaller, regional outbreaks with far fewer deaths • Does not re-ignite in the capital • Grows much more slowly than in spring. Endemic equilibrium is **imminent**



Dr Yeadon has adjusted the size of the susceptible population in Chart 2 so it is between <30% and <40%

76 1,1 Tsd. 2,0 Tsd.

Andrew Lazarus, sheltered-at-home @AndrewLazarus4 · 8 Std.
Both daily cases and deaths are increasing. (You can't argue excess deaths are an artifact of testing.) This is literally impossible in a population over the herd immunity threshold. There's slowing of exponential growth from social distancing measures.

Antwort an @AndrewLazarus4

Important to note that you can get excess deaths in a population over the HIT, as % susceptible pop varies regionally. Agreed w you if excess deaths were everywhere. But aren't they mostly in NE/NW?

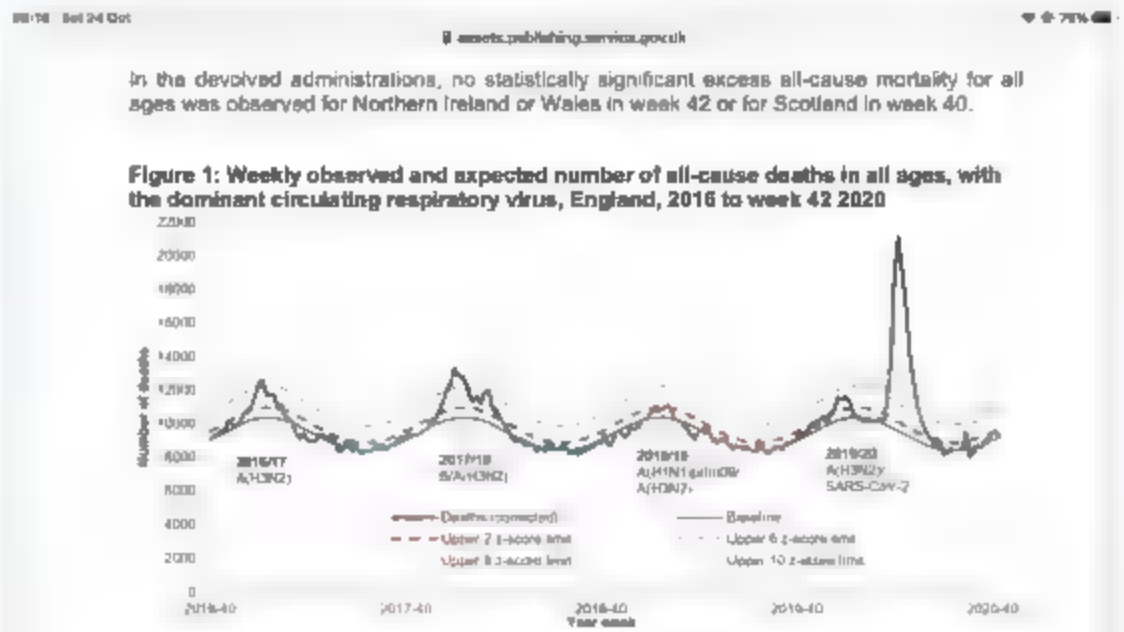
I've been using the feed to EuroMOMO since the spring. I agree with you that a simple count of deaths, while very raw info, is useful in guiding us on excess deaths (or not). It's also least messed-with. It's a # + age band only. No spike, to my eyes.



In the devolved administrations, no statistically significant excess all-cause mortality for all ages was observed for Northern Ireland or Wales in week 42 or for Scotland in week 40.

Figure 1: Weekly observed and expected number of all-cause deaths in all ages, with the dominant circulating respiratory virus, England, 2016 to week 42 2020

Note: The recent weeks' data are estimates with large registration delay corrections and therefore should be interpreted with caution. These estimates may differ substantially to future reports as the actual number of deaths become known

There's no evidence of gross excess deaths in England (EuroMOMO feed is a feed of raw total deaths by week & age band).
There's also no evidence of excess deaths, even in the band which should contain 99% of genuine Covid19 deaths.
Neither are consistent with an o/g pandemic.

FULL BLOWN PANDEMIC CONTINUES	
Testable predictions: • Very large number of additional deaths • Will resume in the capital • Will proceed at similar speed to spring	**Testable predictions:** • Smaller, regional outbreaks with far fewer deaths • Does not re-ignite in the capital • Grows much more slowly than in spring.
Will continue **indefinitely**	Endemic equilibrium is **imminent**

Dr Yeadon has adjusted the size of the susceptible population in Chart 2 so it is between <30% and <40%

78 1,1 Tsd. 2,1 Tsd.

Paul Collyer @dobssi · 21 Std.
The bit I have a problem with is 32% newly immune on top of 30% prior immune. Is there not overlap there as prior immunity would give milder disease?

2

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @dobssi

Agree it's math. incorrect to represent 'pie segments' as crisply separate. I struggled with representation, hence boxed footnote. Pre-immune won't participate in infection. BUT bottom line is % susceptible is NOTHING LIKE SAGE SAYS IT IS. That's the point of the chart.

Thanks, Louise. I confess: it's a lonely place being perhaps the only one going as far as I do that SAGE is negligent & wrong in implying "full blown pandemic is ongoing". Sorry folks: it clearly isn't. Why is no one in media saying this?
Is it Ofcom guidelines? Thats censorship.

80 1,2 Tsd. 2,1 Tsd.

Marc Pian @Marco_Piani · 9 Std.

Curious why you think that getting above R = 1 from below (like has been happening now) should lead to the same dynamics as getting below 1 from a much higher initial R in the Spring, under the condition that there are still many susceptible people.

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @Marco_Piani

Bluntly, R is their guess. It's not a measured value, but an output from a horribly flawed model.
It's also based only on PCR positivity & as we learned in summer (to say nothing of New Hampshire whooping cough) is not to be trusted as a diagnostic tool.

matt lilleker @mlilleker · 23 Std.
Some very quick maths on how many people have had the virus. John Ioannidis at Stamford published a 0.2% infection fatality rate. At 45,000 deaths that's 22.5 million infected?

3 1 8

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @mlilleker

Yes, that's 1 of my 2 sources to estimate infection. The other is rougher, an adjusted multiple of those with antibodies. Only a small minority of infections lead to persistently elevated Ab. That estimate lands in the high 20s %, too.

Key point: it's NOT 7%, as SAGE says.

Antwort an @jobaetke

That's literally impossible. You'd need to rewrite all the laws of mammalian immunology for that to be true.

If we didn't develop immunity, how did the 99.94% of the U.K. population who haven't died beat the virus?

You & it fight, you usually win, and that leaves you immune.

Around immunity (herd)

Immunity to disease or infection?

And how durable?

2

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @Bobforster15 @AndrewP67483998

Those who survived SARS in 2003 all have T-cell responses to SARS, seventeen (17) years later.

They all also have T-cell responses to SARS-COV-2, even though they'd never seen it.

Cross immunity is rule, not exception. These CoVs are 80% identical.

Expect same re SARS-COV-2.

May I ask why you think immune responses to this rather stable virus, not immunosuppressive like HIV or rapidly mutating like influenza WON'T leave survivors immune?

Strongest direct evidence of robust, durable immunity is dearth of reinfections. But it's expected anyway.

....enforcement of broadcast standards in relation to the above issues. In these cases, it may be necessary for Ofcom to act quickly to determine the outcome in a proportionate and
transparent manner, and broadcasters should be prepared to engage with Ofcom on short timescales.

1 1

Yardley Yeadon @MichaelYeadon3 · 6 Min.
Ofcom will consider any breach arising from harmful Coronavirus-related programming to be
potentially serious and will consider taking appropriate regulatory action, which could include the
imposition of a statutory sanction.

Can anyone resolve the contradiction between this plot (all-cause mortality, compared each week average of last 5y) & the daily deaths ascribed to covid19?
Is there a plausible explanation that ISN'T simply misdiagnosis?
Source: EuroMOMO, data is no more than 1 week trailing.

I like the motto on Lockdown Sceptics site:

"Stay sceptical, Control the hysteria, Save lives".

It's perhaps the broadest repository of scientific, medical & political insight there is, because newspapers, TV & radio are complying with OFCOM's CoV19 'guidelines' ie censorship.

Gareth @just_garf · 22. Okt.
Total deaths rising pretty sharply tho?

1

Ashley Giles @get_involved1 · 22. Okt.
We need to see the comparison of what is happening now with the last 5-10 year average... my understanding is that the increases in hospital cases for respiratory illness is much as it usually is this time every year.

2 3

Gareth @just_garf · 22. Okt.
Yes, I believe the deaths in the first spike were a lot of people who only had months left anyway, that's why I'm interested in this latest rise. Anyway who knows, they've probably just started marking as many deaths as they can get away with down as Covid

The annoying thing for SAGE & Govt is total all causes mortality remains stubbornly unremarkable. It's completely flat vs last 5y. Nothing unusual happening at all.

Yes, I recall this at the time.
It's ingenious work which much better accounts for the fact we're at most a lumpy mixed porridge of a population & not a homogeneous bowl per Imperial.

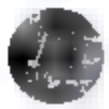
Masks seem to work in Asia.

29 6



Carnal Dancer @lessantman · 21. Okt.
2 million Japanese got the flu last year. So masks are not a plausible explanation for their relatively good 2020. Greater exposure to SARS1, fewer frail available BECAUSE of the bad 2019 flu, little obesity? But if masks dolidn't stop larger flu particles...

3 1 39

XraTa @Xra_ta · 21. Okt.
Are you saying masks are useless? This engineer would not agree. We could develop a mathematical model to show they are partially effective and test this under real world conditions

We already have the peer reviewed RCT result.

ncbi.nlm.nih.gov/pmc/articles/P …

Among others, this paper is cited by one of Prof Heneghan's colleagues in his meta analyses on masks. I think he's Prof Jefferson?

Carnal Dancer @lessantman · 21. Okt.
Huh? I said they don't explain Asia. Slowing the spread just delays cases. Whether we drive to Immunityville at 60 miles per hour or 50, we don't have herd immunity until we have herd immunity. How do you explain Asia's 2019 flu epidemic when masks were also popular then?

2 2

Yardley Yeadon
@MichaelYeadon3

Antwort an @lessantman @Xra_ta und 3 weitere

Actually, it's more subtle. Protection grows as % susceptible remaining falls. Expansion gets slower as we approach a herd immunity threshold.
I'm merely saying herd protection has a braking effect on expansion long before HI. It's the cause of the April reversal of daily deaths.

Kevin McKernan @Kevin_McKernan · 10 Std.

The focus as been myopic ironically. It is focused on the reduction of large droplets while failing to consider if the larger droplets are getting nebulized into smaller ones.

7 42 256

Kevin McKernan @Kevin_McKernan · 10 Std.

If you study the field you will see viral nebulization is a technique used to get higher infectivity of viruses. This is used with ventilator patients suffering from pseudomonas aeruginosa infections. Nebulize bacteriaphage to get deep into the lungs and kill bacteria.

Adrian Cleasby #FBPE @AdrianCleasby · 12 Std.

The 65k excess deaths this year were: a) not in winter; b) above the rolling average that includes 2017/18; c) caused by a coronavirus with a mortality rate between 15-50 times higher than influenza and apparently way more infectious.

3 5

Yardley Yeadon

Antwort an @AdrianCleasby @berniespofforth

You're wrong about lethality. It's perhaps 2-fold flu at present.

History shows that IFR always falls as we learn more & appreciate that many more people have been infected than at first thought. Always mild / asymptomatics.

Expect covid19 = flu in due course.

I think this is self-explanatory. What isn't is the extreme over-reaction, especially now, months after the excess deaths peak of the European spring has clearly washed out more than 90 days ago.
Remember: viruses don't do waves.

There was a terrific piece on Spectator's Coffee House blog yesterday by Carl Heneghan and Tom Jefferson entitled "The ten worst Covid data failures". Here are the first three:

> 1) Overstating of the number of people who are going to die
>
> This starts with the now-infamous Imperial College London (ICL) 'Report 9' that modelled 500,000 deaths if no action was taken at all, and 250,000 deaths if restrictions were not tightened. This set the train of lockdown restrictions in motion. Some argue that Imperial's modelling may have come

...to which it is claimed that deaths with or by Covid19 have allegedly increased.
I believe the dominant reason for this extent of misdiagnosis is the horribly flawed PCR testing system. There's no possibility that COVID-19 'cases' & deaths will fall until testing is mended.

But Michael you *know* and have *admitted to me on here* that the ONS infection survey uses good labs and runs a PCR with a very low FPR. Why has that gone up in lock step with pillar 2 testing? Coincidence? You're supposed to be good with data, is that really a logical theory?

Clumsy Ninja @crafty_cheapsk8 · 2 Std.

Antwort an @MichaelYeadon3 @tomyoung79 und 3 weitere

Post -covid positive deaths are running at 1% of cases (with 10 day lag). If we accept that they are "false positive deaths" them it stands to reason that the death rate is the same for the entire tested cohort, irrespective of result. This is the same death rate....

- Of those who do, a significant proportion (exact number not yet clear) have no symptoms.
- Of the symptomatic cases, the **great majority** (around 80%) a mild-moderate disease.
- A minority have to go to hospital, most need only oxygen. The great majority of these survive.
- A minority of those need ventilation.
- A minority of every agegroup sadly die with current treatment, but even of the oldest group most do not.

I think there's no other plausible explanation for the dearth of deaths in London due to the virus.

If others disagree, please describe how & why London has been spared several hundred excess deaths per day.

No. You've alighted on a very narrow item that I've not only countered completely but you've failed to notice that this isn't material to whether or not herd immunity has been attained.

Unless you can destroy any of the fundamental points on that, you're just going to look silly

17:15 - 25. Okt. 2020

Madam du BonBon @MadamDuBonbon · 14 Std.

Guidance published 10.08.2020. They're screening thousands of women regardless and should any asymptomatics be picked up whilst they're in, it's counted as a covid admission.

I admit I've not focussed on Wales but that might make my viewpoint fresh.
I wonder if almost everything is down to false positives greatly worsened by testing people already in hospital. Let's say there's some covid19 in the community (not convinced, myself, but I'll go with it)

> **Jonathan E** @jengleruk
> Antwort an @Brixton_Ben26
> Is that right though? Although they become +ve while in hospital, is it then the reason they need to be there, or are they still there for the original admission reason with little/no Covid symptoms?

32 122 332

Mark Thornton @marktho24679472 · 14 Std.
To win argument
I think false positives red herring
For instance in July assume all +ves = False
Then calc as %age of All Tests done
= Rough False Positive Rate
More likely
Lockdown stopped spread from London to wider country
Now virus catches up
Allow time for vaccine to arrive

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @marktho24679472

I don't think there's the slightest evidence that what we call lockdown regarded transmission.

We're not going back to a pre-Covid world anytime soon. The quicker we accept that, the more we can reduce deaths and economic disruption.

Antwort an @greatnorthviews

I'm sorry to hear that. Illness is real. But there are scores of respiratory viruses & normally we don't try to match the genetic sequences of possible causative agents because we treat symptomatically anyway.
I'm saying it might or might not be covid19.

nytimes.com/2007/01/22/hea...
I also read the scientific articles reporting the aftermath & there's another echo: positive PCR tests were at very high cycle thresholds, like Ct41.

It occurred to me, was this New Hampshire 'outbreak' the model which has been followed with SARS-CoV-2?

I'm a fan of clinically proven vaccines (efficacy/safety) being offered to those at risk.

Any vaccine vs Covid19 is an experimental intervention.

We don't know if they prevent infection, reduce severity, transmission or deaths.

No long term safety data.

Illegal to coerce.

Replying to @icnoble @DPJHodges

It's a good point. But I think since the peak clearly arrived then fell away, this fact alone speaks volumes about herd immunity. There is no plausible alternative explanation for why a rapidly accelerating turned in weeks & ran down all summer with an implied R<1.

Lee Mc Donald @McDaddy99 · 23 Std.
What is the best explanation you can give to a lay person regarding the term second wave as its repeated over and over?

2 2 4

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @McDaddy99

I don't know. When first I heard it I was confused. But then it was mentioned repeatedly all day, every day, until it was expected.

But there's SUCH a disconnect between 'cases' & deaths, there's no excess death & PCR test FPR isn't disclosed.

I think it's manufactured.

Yardley Yeadon @MichaelYeadon3 · 51 Min.
PCR testing yields positives & negatives, but no truly useful information.

How can this be?

They never disclose the false positive rates & accompanying QA/QC docs.

I now believe the FPR isn't being measured & is unknown.

If so, this nightmare will never end.

25 97 300

Red Rock1t @RedRock1T · 44 Min.
apparently the UK tested 1M people from Sat PM to Monday PM.... thats 347 people per minute flat out for 48hrs.., where are the queues, where are the labs, where is the paper work ?

Antwort an @Richard18621 @DPJHodges

I expect she said it in such a way as to cause alarm? People may not know antibodies usually fall away if the inciting stimulus goes away. This makes sense, there's only limited capacity for serum to contain antibodies. But you retain immunological memory anyway. It's irrelevant.

John Bye @_johnbye · 18 Min.

That says that IF the FPR is 1% (it isn't) and IF the prevalence of the virus is very low (which it isn't anymore), then yes, most positives would be false.

But the FPR seems to be less than 0.1% and 5-10% of tests are positive now. So only a tiny fraction of them are false.

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @_johnbye @Summers33456923

Please cite your source for a FPR at any value, let alone the example you gave.

Please note that most of the errors giving rise to FPs are not intrinsic to the kit, but the sample preparation, so a FPR determined months ago is no guide at all to what it is today (or last week).

negative test result, you must continue to self-isolate. Antibody tests are understood to be accurate in all cases where a person has not suffered with coronavirus, presenting a false negative in approximately 16 percent of cases where someone has had Covid-19. I know that developers of these tests have been working to maximise accuracy, and I will continue to follow this issue closely.

2

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @LesVagus

My answer may surprise you, and it's absolutely not complacency, but false negatives are not considered problematic when prevalence is low.
During spring, when in A&E prevalence was high, FNs could have been a problem but as we treated symptomatically, even then it was overcome.

Wokeman, I dislike destruction @Wokeman8 · 14 Min.

It is statistically impossible for a novel virus 93% are said to be susceptible to, with a supposedly high IFR (0.5%) to not cause significant excess mortality. One has to imagine the major causes of death like heart disease and cancer have taken a sabbatical for that to be so.

Incorrect. They've not studied immunity but instead the decay curve of circulating antibodies.
It's normal for antibodies to fall if the agent disappears. Not a good marker of immunity at all.

39 260 972

BBC report this morning that immunity may only last a few months. More leaning into the government's intended narrative and agenda. How suddenly they ignore all previous scientific evidence and make up new 'science' to support whatever their objective is. My interpretation; lies.

1 1 1

P. Verbij @furbster80 · 52 Sek.
If that was true, there would be more casualties of H1N1 in 2009. This was the same Spanish flue of 1918 who killed 50.000.000 worldwide (worldpopulation 1.8 billion 1918)

EyesOnThePrize @EyesOnThePriz12 · 11 Std.
I respect the views of @romhartemink who has a very different take on things - fearing the real second wave will hit in the next few weeks as the season gets colder.

We'll soon know who's right. My concern is that the SAGE idiots have no varying scenarios by which to judge.

1

Admiraal de Ruyter @romhartemink · 11 Std.
Multiple dry days combined with cold nights is the high transmission period. (low absolute humidity) Also the South will inevitably see Case rates of those currently up north. (London might have higher immunity and more R reduction due to high impact work from home)

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @romhartemink @EyesOnThePriz12

You could be right. What would weather conditions in Sweden be expected to do to transmission?
I ask not to be difficult but because Occam taught the simplest explanation adequately explaining the essential observations is more likely to correct than more complex explanations.

This more accurately puts Covid19 as a cause of death in context with other lethal, infectious diseases.
Governments almost everywhere have introduced 'measures' which have resulted in more deaths than by or with this pathologically rather unremarkable virus.

Source: Deutsche Bank, Federal Reserve Bank of San Francisco, wikipedia and publications of epidemics and various online information sources. OurWorldInData: In the analysis we looked at 24 pandemics and epidemics over the last 2000 years where the historical literature suggests at least 100,000 fatalities. We have then calculated this as a proportion of the world's population at the time

There was a terrific piece on *Spectator*'s Coffee House blog yesterday by Carl Heneghan and Tom Jefferson entitled "The ten worst Covid data failures". Here are the first three:

1) Overstating of the number of people who are going to die

This starts with the now-infamous Imperial College London (ICL) 'Report 9'

There are numerous papers on pre existing immunity. Hence why wave 1 simply did not just infect everyone. Perfect examples were the diamond princess and the USS Theodore Roosevelt. All they say in this is that "There maybe T Cell immunity" dreadful.

2 6 33

Patrick Murray @MickeyPearce17 · 1h
There must be tens of thousands of (vulnerable) survivors, who went back to their care homes months ago.
Any reinfections?
This is hard core data that can be used.
Vulnerable does not just mean old and sick it means much more sucseptible to infection as with COPD sufferers.

@BBCHughPym why won't you interview @MichaelYeadon3 ? He's publicly called Vallance and SAGE liars. That's *quite* a big deal surely? Or are you prevented from doing so?? At least tell us.

Antwort an @sgbart @BBCHughPym

Not all of SAGE, necessarily. Many talking heads you see are mathematicians & it's possible they believe what they're saying.

Agreed. Yet Imperial failed to discuss t-cells in their paper. We are fighting a losing battle here. Only 'science' which supports the narrative is being published and disseminated. Imperial are the political arm of 'science'.

2 9 33

Yardley Yeadon @MichaelYeadon3 · 2 Std.

It's more than disappointing because even the BMJ published a really extensive review summarising all the key science, mostly 2020 & in top, peer-reviewed journal articles around T-memory responses to SARS-CoV-2, SARS & indeed endemic coronaviruses (eg OC43, HKU1, 229E..).

3 5 16

Simone @simonevdm · 1 Std.

I have read about a handful of people in NL that did get reinfection again. And very few had it worse the second time. So far rare, but I do wonder why.
Because I do believe that our T cells should protect us.
Maybe their immune system isnt optimal, D3 too low, things like that.

2

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @simonevdm @Louise_katz @js100js100

Do you think it's likely that there'd be anything immunologically unusual about this virus?

I ask because unless there's reason to expect it to behave differently from others, a balanced expectation is that our immune system will handle it in a typical manner.

When you hear people setting way too much store about how long antibodies circulate, please know they're mistaken. That's not how immunity to most viruses is manifest. It's mostly T-cells, as many of us have said for months.

survey suggests that COVID19 immunity after infection is short-lived, so recurrent infection is a risk. Think in terms of the uncommon cold—you catch it every year, with a 1% risk of dying ... /1

16 4 49

Charlie Stross @cstross · 12 Std.

The "uncommon cold" scenario is the worst case: it keeps coming back and over a 30 year period it kills up to 50% of the population—on a par with the Black Death.

COVID19 is less than 12 months old. We can't rule this scenario out yet.

/2

10 3 33

Charlie Stross @cstross · 12 Std.

If immunity was long-lasting—or we had an annual vaccine/booster shot—we could relax a bit.

But there's still a real risk of COVID19 turning out to be a civilization-ending disaster.

Antwort an @cstross @JamesMelville

I guess if "99.94% of each population through which this virus has passed survived" is civilisation-ending, well, then you'd be right.

Kevin,
Thanks, I'll read later, I hike anyway. Never enough time.
If you scan it, I'd like to know
-do they define how upper Ct is to be set?
-do they have an SOP for defining the FPR regularly?
If not, it's useless & nothing will change.
Thanks!
Mike

- It's not a 2nd wave, it's a secondary ripple

2 1

Sara Haboubi @SaraHaboubi1 · 39 Min.
I think that there are so many rabbit holes that one can get caught up in them. I support that he is saying it's over. For me that is the message most can hear. The other stuff is too much for most ppl. They simply cannot hear certain things.

1 1

Malfeasance Ignoble @shazdeven · 28 Min.
You're taking that one sentence to confirm he's kosher? He says it's over yet claims there's a secondary ripple. That's a contradiction.
He says there's a pandemic, yet he states there's no epidemic in London. How can you take this guy seriously?

1

Sara Haboubi @SaraHaboubi1 · 14 Min.
That's not what I heard him say. I accept that there are many layers to this. For a lot of ppl the deepest layers are simply too much to a accept. I'm not sure why you are pursuing this with me. Let's leave it there.

1 1

Malfeasance Ignoble @shazdeven · 4 Min.
My hearing must be more acute than yours. I suggest you listen to the podcast as it's obvious you haven't.

Hello Dr Rashid, have you seen the analyses of deaths by Dr Clare Craig FRCPath? She has serious reservations about diagnoses.

I believe you, Mr Yeadon, but it would help me persuade others if you could explain why the graphs of hospital admissions and deaths rising LOOK like a second wave. I'm not sure I've understood that yet. Many thanks, your ongoing involvement is very much appreciated.

It's not just "cases" which flow from fundamentally poor PCR testing. No, this error extends to false positive admissions, false positive ITU visits & finally to false positive Covid19 deaths.

Thank you. I'm also a fan of antibodies. You don't want to be without them. Detect a bacterium slithering up the staircase, you want to thrown a net (antibodies) over & get rid.

But primary defects in making antibodies are often 1st detected due to repeated bacterial infections.

The classic is I think one of them says “sadly, the vast majority of the population remains susceptible”.

Someone leaked SAGE’s advice within 10min or Boris talking about Tiers.

2nd para of the “NPIs” document says “>90% remain susceptible...”. Presumably they signed off on it.

The classic is I think one of them says "sadly, the vast majority of the population remains susceptible".

Someone leaked SAGE's advice within 10min or Boris talking about Tiers.

2nd para of the "NPIs" document says ">90% remain susceptible...".
Presumably they signed off on it.

This report summarises some quite remarkable clinical findings, in which administration of Vit C was associated with reduced mortality from Covid19.

Needs a careful read & more importantly, it needs writing up in full. Interesting, anyway.

I wonder, Florian: I recognise the T-cell assays are totally different in every way other than for blood, and even then you'd need much bigger volumes.
But is there any opportunity to examine T-cell responses in a small subset of subjects in parallel?
That would be super cool 😎

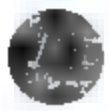
"About 10% of the global population may be infected by October 2020. Global infection fatality rate is 0.15-0.20% (0.03-0.04% in those <70 years)"

You can make an estimate of the % of U.K. population infected by reference to Covid19 fatalities to date & the IFR. It's not...



18 151 337

Marcus Hollick @hollick_marcus · 13 Min.

I think you've overlooked one major problem. The governments mismanagement of the first wave skewed the IFR rate. It explains a lot in relation to the continued panic. The same can be said of a lot of European countries.

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @hollick_marcus

It's a good point if you mean pushing the elderly out of hospitals.
But the horrible reality is that this pattern, huge deaths in the elderly & frail has appear in pretty much all heavily infected countries.
So while there's something in that, it's not enough to move IFR far.

I agree nothing is secure without measuring it.

What's more dubious is what SAGE has done. Ignore it. Decide it has zero validity. Leave it out of the models.

Even though the principle of cross-immunity is older than vaccines: cowpox & smallpox.

Also, the profile of the pandemics in U.K. & Sweden is essentially identical except for the autumn component.

Sweden believes that only a relatively low % of the population got infected before herd immunity was attained. That required a prior immunity around 30%. It's quite neat

Antwort an @miken271

It's a neat piece of work, but I believe you've used the kit's intrinsic FPR.
Sadly, the bulk of the 'operational' FPR relates to sample preparation, contamination & other errors.
It has to be measured. Earlier values for it do not now apply.

People of U.K.: you've a right to know what the FPR is.

If it's low, I can skink away, embarrassed.

If it's just a few %, where I think it is, you'll get your country back.

If you don't get that broken PCR test in the community STOPPED v soon, that's it. Where will this end?

Anyone know how many times a person can be tested positive ?

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @warmblood

No upper limit. Long stay patients get tested much more: odds must increase that they get a FP.

Long stay patients are also much more likely to die.

This ‘confounding by severity’ surely contributes to incorrect assignment of cause of death?

And more so as #s tests rise?

Public sources on mortality in U.K., both excess & causes of deaths show a consistent pattern: “THERE ARE NO EXCESS DEATHS” & there haven’t been since end-June.
I believe the SARS-CoV-2 ended then. Everything since is medical fraud at huge scale. False positives are the tool.

Hector Drummond's Living With the Tiers of a Clown @hector…
Scatter graphs of weekly Covid deaths vs excess deaths, for England regions and Wales. The first graph is weeks 12-24, second is since September....

En réponse à @Jon_statistics @PHE_uk

That's a catastrophe if true.
28d post +ve TEST captures those arriving in hospital with symptoms. Sadly, 98% die or clearly on road to recovery well under 28d from symptoms sufficient to cause possible admission.

60d: I strongly oppose. It'll artificially raise 'covid deaths'.

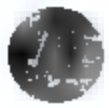
ONS stats week 42 (to 16/10) - 669 excess deaths (6.8%). 670 deaths with covid on death cert. Since then, post-positive test deaths have nearly doubled. There will be even more excess deaths next week.

3 2

Yardley Yeadon @MichaelYeadon3 · 2h

Important to recognise covid19 on DC tells you ONLY they had +ve test last 28d. Spoke at length to pathologist this AM. Those deaths you mention: not clinical covid19. Too young. M/F equal. Not respiratory. Mostly heart f & stroke. Wake up.

3 4 51



Clumsy Ninja @crafty_cheapsk8 · 2h

LOL! All brought on by the stress of the test result, then, I presume? Because if the -ve test recipients were dying at the same rate - let alone the rest of the country - there would be 21K deaths per week - NEARLY DOUBLE what we're seeing.

Must try harder, Michael! WAKE UP!!

I don't doubt for a moment they're dying but I've gone line by line with a pathologist who read out the basic clin description. It's as I summarised. Those characteristics shout 'not real covid19' as illness. I don't trust DCs right now.
Median age was 82.5 in spring.

Or - using 7d lag to death - there were 87,752 +ve tests previous week (by reporting date). That's 0.13% of the national population. So if the rest of the country was dying at the same rate as them, we would have seen 515,385 deaths that week. There were actually 10,534.

You've lost me there, sorry.
I'm saying people are dying at v near normal rates.
Those tagged Covid19 them dying right now are mostly just the wrong description for what we've seen 43000 times before.

Kevin McKernan @Kevin_McKernan · 26. Okt.

LODs
Limit of Detection.
Take RNA, perform a serial dilution in qPCR and measure how low you can go. Most tests crap out 50 copies of SARs RNA at around 37 cycles. Calling positives past your Limit of detection is shady. I think there is a lot of this going on.

12 130 492

Kevin McKernan @Kevin_McKernan · 26. Okt.

This can create False positives that can transform a pandemic into a "case-ademic". There are a few papers circulating that demonstrate this effect on other outbreaks that have occurred in the past. Please post them to this thread if you have them at your fingertips.

-Exactly. If it was 'classic covid19 deaths' the median age would be approx 82y with sharp tail to younger ages.
-Those dying would've had 2+ serious chronic illnesses.
-60/40 M/F fatalities.
-respiratory issues v common if not dominant.

This ISN'T today's covid19 death profile.

I speak as plainly as I can.
It's not possible to have a lethal pandemic stalking the land, yet not have excess deaths. These ceased end June & haven't returned. PCR false positives explain everything.
But why are they doing this?
I'm a scientist not a detective or mind reader.

Anna Brees @BreesAnna
Interview going on the YouTube channel shortly, with Dr Mike Yeadon he is a former Chief Scientific Officer and Vice President of Allergy and Respiratory Research at Pfizer.

This is an excellent point. You don't get herd immunity to being bitten by mosquitoes or rats.

So it's a rather stupid comparison that Sridhar makes. What can one expect from someone who's technical education halted after a 2year truncated biology 'degree' (3y in UK, 4y often).

> **Phil Edwards** @pedwards_phil
> Antwort an @Ian_Campbell_ @ClareCraigPath @YouTube
>
> You mean scrutinised by peers that retweet impostors like Sridhar who seeks to refute herd imm. by reference to vector-borne diseases like malaria & the Plague? Perhaps Clare is savvy enough to recognise the extent to which her peers are compromised & to bypass them accordingly.

This is an excellent point. You don't get herd immunity to being bitten by mosquitoes or rats.

So it's a rather stupid comparison that Sridhar makes. What can one expect from someone who's technical education halted after a 2year truncated biology 'degree' (3y in UK, 4y often).

Milan Torbica @miltorbica · 5 h

Can we stop referring to ourselves as 'herd' immunity this & 'herd' immunity that. Are we cattle? Or is this the preferred language of the self (or alien?) appointed gods on earth, who really do see humanity as no more than that, hence having instilled such terminology.
We are 7

En réponse à @miltorbica

I am sorry about that term, invented long before I was born!
It does mean something rather specific so I do need to avoid being too Lewis Carroll about meanings of words.

I like “Community Immunity”.

Does that work, while avoiding that whiff of eugenics about it?

Germany did 1.5M tests in the last 24hrs to come up with 16K new cases - which is 1% false positives margin of error - gonna need a bigger country to keep this hysteria up.....

Replying to @RedRock1T

That's interesting. Does Germany release number of tests done along with the findings?

Our U.K. lot don't, not synchronously, like they used to.

On false positive rate, really important. There's some value quoted by the kit maker.

But the main variable is in sample prep.

That can result in literally any FPR, which is why any good lab uses a small number of the tests across the daily batches to assess false positive & false negative rates.

Without this, it's IMPOSSIBLE to interpret the daily findings of "cases".

I hunch we're days from....

...just days from following France down the lockdown rabbit hole.

All - absolutely all - the evidence about "Covid19 cases, admissions & deaths" all flow from one, scientifically corrupted test.

If no one forces Govt to comply with this good lab practise related Q, we're done.

I'm pretty sure that @MichaelYeadon3 mentioned that coronaviruses are fairly stable and don't mutate quickly.

So, based on what I've heard, I'd say the answer is 'no'.

3 18

David Matcham @d_matcham · 6 Std.
Also, he blamed excess deaths on those who tested positive for covid, but who were in hospital for other conditions made worse by lockdown.

It's reasonable to assume that any future excess deaths are from those who should have been treated, but who weren't.

Thank it JOEL. Please everyone, take a look. Weekly death rate England. It's entirely NORMAL. There aren't more deaths than usual. There aren't more respiratory deaths than normal. Govt claims there is a lethal respiratory virus at large, killing 100s per day.
It is misdiagnosis.

In this one wave (for viruses do not do waves!) there was very tight linkage between cases & deaths.

This process, for annual flu, takes 3-4 months max. This newish virus is apparently slightly more infectious than flu. So it'll sweep across the country as fast or faster.

In the real spring pandemic, the number of Covid19 deaths & of excess deaths were VERY tightly linked. That suggests they're the same thing.

That's no longer true. Now there's NO LINKAGE between the number of claimed Covid19 deaths & of excess deaths, became there are no excess.

Respiratory deaths were large (Orange, to the left of the graph you'd have seen the familiar peak). But through summer to this very week, no abnormal respiratory deaths.
In fact, no excess deaths at all.

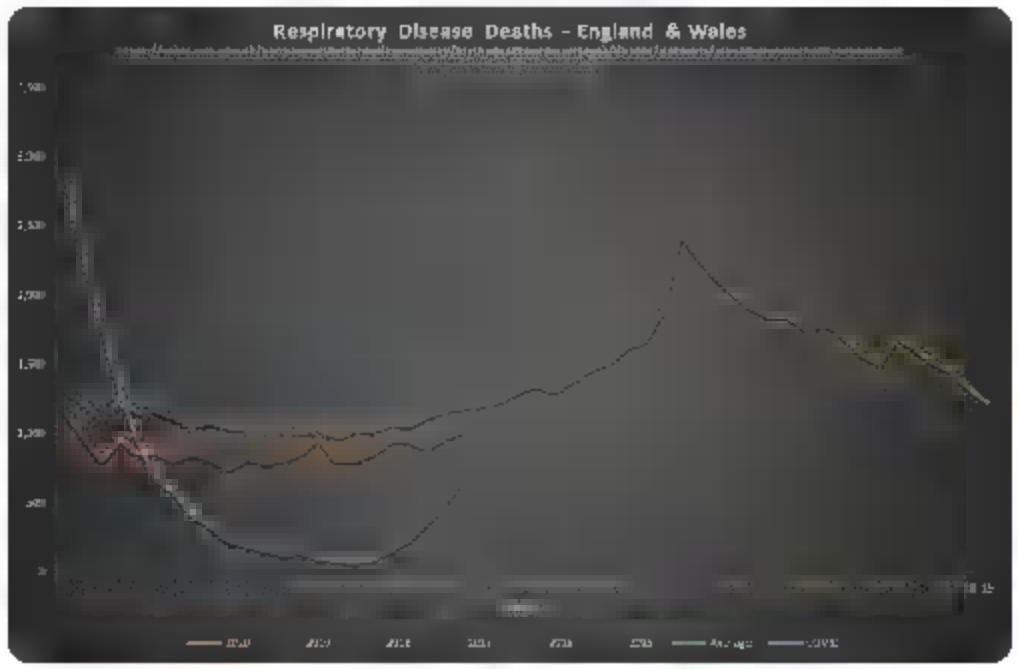
In the real spring pandemic, the number of Covid19 deaths & of excess deaths were VERY tightly linked. That suggests they're the same thing.



That's no longer true. Now there's NO LINKAGE between the number of claimed Covid19 deaths & of excess deaths, became there are no excess.

The Parisians have worked out that this is no longer anything to do with a virus of similar lethality to ‘flu.
No one I know in France or in U.K. thinks it’s to do with a virus, either.
And of course they’re right. No excess deaths in either country.
Don’t say I didn’t tell you.

How can this be? It's simple, but I have to tell you plainly, our Govts advisors, SAGE, are lying to us daily, frightening us deliberately, for reasons I do not understand.

It's not necessary to know they're put motivations to prove their words & recommendations are wrong.

Please don't get hooked on the finer points of the second decimal. The key point is essentially SAGE says nothing material has changed. Oh, yes it has. The right hand chart is absolutely standard human immunology at work.

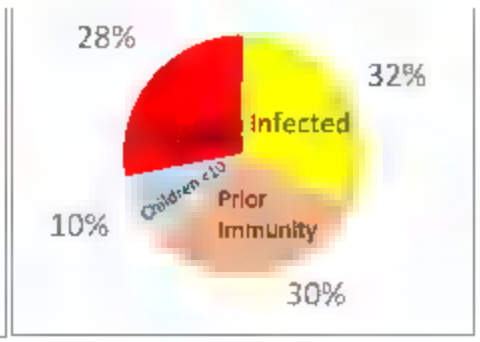

Chart 1:	Chart 2:
-no prior immunity -just 7% infected -93% susceptible remain ***FULL BLOWN PANDEMIC CONTINUES*** **Testable predictions:** • Very large number of additional deaths • Will resume in the capital • Will proceed at similar speed to spring Will continue **indefinitely**	-30% prior immunity -as many as 32% infected -28% susceptible remain ***PANDEMIC IS ESSENTIALLY OVER*** **Testable predictions:** • Smaller, regional outbreaks with far fewer deaths • Does not re-ignite in the capital • Grows much more slowly than in spring. Endemic equilibrium is **imminent**

Dr Yeadon has adjusted the size of the susceptible population in Chart 2 so it is between <30% and <40%

I believe now that they forced the pace on testing to the extent the poor performance on false positives makes it worse that useless. False positive city.
Every factor driving FPR is in place. I don't believe they can justify their claims about 'cases' (& deaths).

Does anyone have authentic sources for the IFR that Prof Ferguson / Imperial used initially?
I'm thinking 0.9% is that true?
But I believe v recently they've rightly reduced it, perhaps to 0.7%?
Is there are source for each?
I'm writing & want to be accurate.
Thank you

6% AliceNoChains @WRabbhit · 13 Min.

lockdownsceptics.org/how-convincing…

It was 0.9%

> The answer is via a route which Ferguson20 simply did not explain. It provides a rounded Infected Fatality Rate ("IFR") of 0.9% (p.5; the actual IFR figure they worked from seems to have been 0.943%), which is represented by the 510,000 projected deaths. They also assumed that 81% of the population would be infected because they estimated an R_0 of 2.4. This means that 510,000 would die out of 54.12 million (81% of the UK population of 66.8 million) if one uses an IFR of 0.943%. This population figure is for mid-2019 from the ONS, but the real figure is probably slightly higher for 2020.[5]

You mean like what happens yearly with flu that has sonehow miraculously disappeared. It's a virus and we have to learn to live with it. Everyone can make their own risk assessment and decisions

1 12

Jan Leach @nagivatorjan · 3 Std.

Trouble is, it's more virulent than flu. That causes an average of 25k deaths in the UK per annum, some years less than 1k, some years 50k+. Imagine if we had a bad flu year next year as well!

2

Debbie @DeborahTaylor3 · 3 Std.

It's most contagious, yes. Is it as deadly, not priven. People still have post viral fatigue syndrome with flu and pneumonia too as with covid. Let the country live

1 2

Jan Leach @nagivatorjan · 3 Std.

The problem is that, as yet, it isn't properly understood. The long-term effects appear to be more severe than with flu or pneumonia, one being that it apparently can age your brain in some cases, probably leading to early-onset dementia.

2

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @nagivatorjan @DeborahTaylor3 und 3 weitere

No, I disagree that there's any evidence that post viral syndromes are more severe or more prevalent after One virus than another. Also I don't believe we've the right to chuck everyone else 'under the bus' in such a way.

This must be stopped.

We don't have excess deaths & certainly we're BELOW usual on respiratory deaths.

Covid19 is a respiratory virus.

If it was still stalking the land, we would definitely have 200-400 excess respiratory deaths per day.

We don't.

Daily Mail piece on Saturday.

It details the incompetence of SAGE.

They were wrong about deaths in spring.

By 10-15 fold. That's shattering incompetence.

Spring lockdown did NOT reduce virus transmission.

It won't work now either.

But it'll kill people, business & UK.

In Daily Mail now, get yours Saturday & please share widely.

If you're not yet scared of SAGE, you've not been paying attention.

If we're locked down on lies, it won't improve.

I can't imagine any basis for a re-opening plan.

This isn't benign.

In U.K. in spring there was an v strong relationship between covid19 deaths & excess deaths. Correlation isn't causation but it's strong evidence - in spring - that the one is responsible for the other. In formal terms it's consistent with that hypothesis. We'd expect it, too.

Even worse. Those same long stay patients get tested REPEATEDLY. If they get a positive test & then die within 28 days, they are defined as a Covid19 death. The critical thing to know is that even if the virus stops circulating, the misdiagnoses, the 'false positives' continue.

I forgot to say, the most likely explanation for this inconsistency is that our measurements are wrong.
The PCR test for Covid19, like all such tests, is capable of 'producing a misdiagnosis'.
Technically we call it false positives.
When a testing system is overstretched and...

So if you're told by previously trusted broadcasters that hospitals are filing faster than ever before & that intensive care will top out way above our capacity, it's just not true.

There are indeed more ill people admitted at the moment. That normal for the time of year.

5 33 105

Yardley Yeadon
@MichaelYeadon3

Folgen

There are not more respiratory deaths than normal for the time of year. They always increase at this time. See Prof Heneghan's work on this.

If you've doubts on the position of the pandemic in U.K., please look again at these pie charts.

Ask yourself: what's protecting London?

I don't need to accurate to the last digit here. I think it's enough to start with the left chart. SAGE'S position is most DEFINITELY WRONG. They're meant to be the experts. And they're wrong. They are proven incompetents & arrogant with it.
Please consider the right chart.

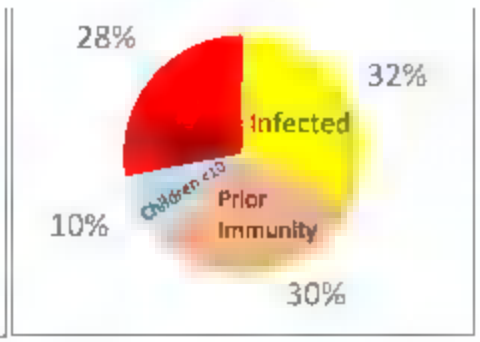

Chart 1:	**Chart 2:**
-no prior immunity -just 7% infected -93% susceptible remain ***FULL BLOWN PANDEMIC CONTINUES*** **Testable predictions:** • Very large number of additional deaths • Will resume in the capital • Will proceed at similar speed to spring Will continue **indefinitely**	-30% prior immunity -as many as 32% infected -28% susceptible remain ***PANDEMIC IS ESSENTIALLY OVER*** **Testable predictions:** • Smaller, regional outbreaks with far fewer deaths • Does not re-ignite in the capital • Grows much more slowly than in spring. Endemic equilibrium is **imminent**

Dr Yeadon has adjusted the size of the susceptible population in Chart 2 so it is between <30% and <40%

...patient gets tested repeatedly. Note, there's a roughly 1.7% chance of not coming out for the broad population admitted to hospital. But it's worse. Those who become longer stay patients are obviously increasingly likely to die. You're pretty ill if you're in for weeks.

1 15 83

Yardley Yeadon
@MichaelYeadon3

Folgen

Even worse. Those same long stay patients get tested REPEATEDLY. If they get a positive test & then die within 28 days, they are defined as a Covid19 death.
The critical thing to know is that even if the virus stops circulating, the misdiagnoses, the 'false positives' continue.

....scientist, the misdiagnosis rate will certainly be considerable. If you were told this & it is roughly where I believe it it be, then the "Covid19 "cases", hospital admissions & even deaths are all NOT COVID19 AT ALL.
Is this even possible??
The shocking answer is YES.

9 63 230

Yardley Yeadon @MichaelYeadon3 · 47 Min.
In New Hampshire in the US, a few years ago, the had what appeared to be a huge outbreak of whooping cough. While the kids coughing didn't seem to be too bad, the tests they were using, PCR tests specific for pertussis showed they did have. Desperate to understand it, they...

So if you're told by previously trusted broadcasters that hospitals are filing faster than ever before & that intensive care will top out way above our capacity, it's just not true.

There are indeed more ill people admitted at the moment. That normal for the time of year.

There are not more respiratory deaths than normal for the time of year. They always increase at this time. See Prof Heneghan's work on this.

If you've doubts on the position of the pandemic in U.K., please look again at these pie charts.

Ask yourself: what's protecting London?

10 45 139

Yardley Yeadon @MichaelYeadon3 · 47 Min.
I don't need to accurate to the last digit here. I think it's enough to start with the left chart. SAGE'S position is most DEFINITELY WRONG. They're meant to be the experts. And they're wrong. They are proven incompetents & arrogant with

Alan, you've clearly not being paying attention.
The pandemic is over. Months ago.
Everything now is medical testing fraud, which is why the characteristics of those dying after a positive test are random & wholly different from spring.

I asked someone the other day roughly how long did they think it takes each season's 'flu to spread around pretty much all corners of the country?
They thought for a moment then offered "3 to 4 months".
I pointed out we're told...

2 2 16

Yardley Yeadon
@MichaelYeadon3

Folgen

...that SARS-COV-2 is MORE infectious than 'flu. I don't know if that is actually true because I don't know how many times 'flu has been handled the same way as the 'new' virus. So I asked how long they would expect this virus to spread through U.K. & quickly came their answer:

1. If you think there's something in what I'm saying, lobby your MP this very weekend, ideally today. You can find their emails for their parliamentary office & phone number too. Write a short email, telling them you've very serious concerns about SAGE's advice to Govt.

2 10 27

Yardley Yeadon @MichaelYeadon3 · 1 Std.
Demand that they in turn lobby No. 10 NOT TO GO FOR ANY MORE LOCKDOWNS OF ANY KIND.

2. Tell them you've seen reports showing that the Pillar 2 community mass testing system is seriously error prone.
Lobby your MP to lobby No. 10 to PAUSE COMMUNITY MASS TESTING IMMEDIATELY....

Michael Levitt @MLevitt_NP2013 · 30. Okt.
Disappointed as a vaccine could be the way out of the impasse the world now faces if it is to return to normal.

Perhaps they need to test safety on a very large sample & release a vaccine that is safe but not too effective. Some would call it PlaciVax but it would do the job.

> **Alexander McCarron** ⚔ @alexmaccaroon
> We're told the only way out of this is a vaccine. A vaccine for a disease so deadly and infectious there isn't enough of it in the population to test the efficacy of said vaccine. Welcome to the Clown World 🤡🦠

Antwort an @Gabriel_Pogrund

That's a non sequitur
Young children aren't immune but they're resistant to infection & don't participate in transmission,

By the time any vaccine is ready we'll be at or over herd immunity anyway

Like U.K. The current signal is probably false positives

Don't think we don't notice you & what your campaign is about.

I will say, it's impressive & meshes nicely with the other, greatly amplified decarbonisation propaganda.

Once seen, one cannot unsee.

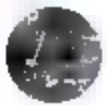
Marin County Yang Gang @MarinYangGang · 28. Jan.

Go vegan! For the animals, the environment, to help end world hunger, and to prevent all these disgusting epidemics like the Coronavirus. So many epidemics have origins in animal agriculture and would never have arose if we were vegan.

1 3 9

Troy Gordon @TroyGordon4 · 28. Feb.

If you are doing it for the environment and you encouraging that they all be terminated for the environment too?



2 2

#BOF Dimitrov **3.5%** @michal_dimitrov · 18. März

Just allow for a sustainable population to preserve the species, that is if they really matter to you.
Do not breed the rest of them artificially.
They all get killed anyway and you breed and kill and breed and kill.
There are two ways to stop the circle.
Not breeding is one

Antwort an @McDaddy99 @danobrien20

U.K. data shows in terms of deaths, virus ceased circulating around late June / early July.

Excess deaths signal after is tiny to absent.

Key fact is NO EXCESS RESPIRATORY DEATHS since June.

Not possible if virus continues to circulate.

"Cases" data is seriously suspect.

Please read my very accessible review of the pandemic here:
lockdownsceptics.org/what-sage-got-…
Nothing here is my speculation. All drawn from peer reviewed journals or work in review by worlds top immunologists & epidemiologists.

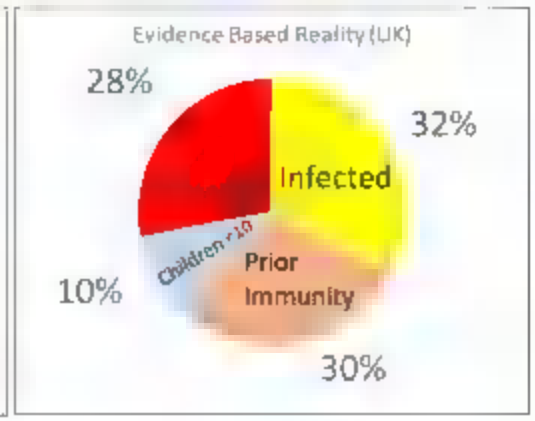

Chart 1:

-no prior immunity
-just 7% infected
-93% susceptible remain

FULL BLOWN PANDEMIC CONTINUES

Testable predictions:

- Very large number of additional

Chart 2:
-30% prior immunity
-as many as 32% infected
-28% susceptible remain

PANDEMIC IS ESSENTIALLY OVER

Testable predictions:

- Smaller, regional outbreaks with far fewer deaths

Since writing this I've come across several anomalies in the public record.
1. Virtually no excess seats since July.
2. NO EXCESS RESPIRATORY DEATHS since July.
These are inconsistent with SAGE's claim that a full blown pandemic continues.

I've worked in mass testing. It's...

Yardley Yeadon @MichaelYeadon3 · 14 Min.

Since writing this I've come across several anomalies in the public record.
1. Virtually no excess seats since July.
2. NO EXCESS RESPIRATORY DEATHS since July.
These are inconsistent with SAGE's claim that a full blown pandemic continues.

I've worked in mass testing. It's...

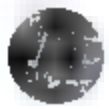
Worked very well last time. We just opened up too fast and with many people carrying on as if nothing had happened and a failed track and trace system.



Alternative to not locking down then? A minority will not follow any rules ruining any attempt to control this by any method.

20 1 4

Antwort an @Ianvincentscott @NormandyOrBust und 2 weitere

Agreed. 9 mo ago, this virus began its “full pass” through the U.K. population.

As ‘measures’ did not retard it’s spreading, it’s certain that this process has concluded.

No highly infectious respiratory virus takes twice as long as ‘flu to reach equilibrium.

What, the right amount of warmth everywhere in Europe?

While I'm totally ready to expect seasonality, an explanation must explain all the observed facts.

Turning points from Sweden to Iberian peninsula coincided.

No. It was something else, imo.

Just a Quick Question...If someone has had a Flu Jab in the last few days or weeks and then has a PCR Test would it show as a Positive Result ??

2 1

Yardley Yeadon
@MichaelYeadon3
Folgen

Antwort an @kimsbabe @emmakennytv

It should not do that. Influenza virus & SARS-CoV-2 are not alike.
Providing the PCR test was set up using 'primers' (aka bait) selective for the latter, it should be negative.

I chose 30% as it was the lowest of the cluster of estimates. Outliers were 20% & 80%.
Even if it was 20%, it doesn't materially alter the position.
Learned fantastic info today: 60% of residents in a handful of care homes who remained free of virus & symptoms have antibodies.

Even more stunning was they'd taken baseline samples BEFORE the virus arrived. These samples also contained antibodies to a virus they'd not seen.
The prior immunity was cross-immunity. And the antibodies were directed to the same epitopes which lit up T-cells in others' studies.

Antwort an @Mr__King_

Based on numerous careful papers, I expect:
-additional excess home deaths from treatable illnesses
-depression, anxiety, loneliness & suicides will mount further
-economic destruction will make 1929 & 2008 look minor in comparison.

Won't do anything to virus transmission.

Antwort an @asentance

If you're suggesting that SAGE thoughtfully sifts the evidence in a transparent manner before arriving at well considered recommendations, we've been living on different planets since the start of the year. They don't even have all the basic skill sets required to do that.

But we've been wearing masks, self-isolating, working from home etc all since March? Last week in a train I saw 100% absence of masks. All summer youths around here having parties and raves. Households still visiting eachother indoors. How are you enforcing this?

You appear to think stopping people catching it & becoming immune is a good thing - deeply worrying.
This a stable, non immunotoxic virus with extraordinarily low lethality in that group, lower than 'flu.
Community immunity protects the vulnerable - it's why it evolved this way.

No evidence even a slick TTI system at this stage will make any difference.

The main pathology at large in the country is the uncharacterised PCR testing system. They simply don't appear to be measuring the operational fakes positive rate.

Without this, it's reckless to use it.

John. You're right, I have repeatedly offered but they won't interview me. I'm not a media trained person or political.
But SAGE is just WRONG.
I implore anyone to read this:
lockdownsceptics.org/what-sage-got-…
1 picture confirms they're wrong:

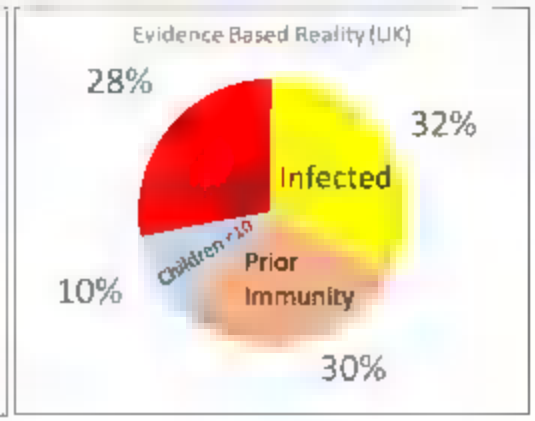

Chart 1:

-no prior immunity
-just 7% infected
-93% susceptible remain

FULL BLOWN PANDEMIC CONTINUES

Testable predictions:

- Very large number of additional

Chart 2:
-30% prior immunity
-as many as 32% infected
-28% susceptible remain

PANDEMIC IS ESSENTIALLY OVER

Testable predictions:

- Smaller, regional outbreaks with far fewer deaths

I'm looking at the data.
Did you know, since summer, in U.K. we have had FEWER respiratory deaths than same period in each of the last five years?
The PCR test as used is FLAWED. Ignore the test.
Look at illness & deaths. These data do NOT even hint at the public Health crisis.

Right, the latest ONS summary. It's always a week in arrears but long ago, BBC and all were telling us of hundreds of 'Covid19 deaths' every day. I've said I think the tests are not reliable at all. So look at total deaths, surely up, right? They're not.

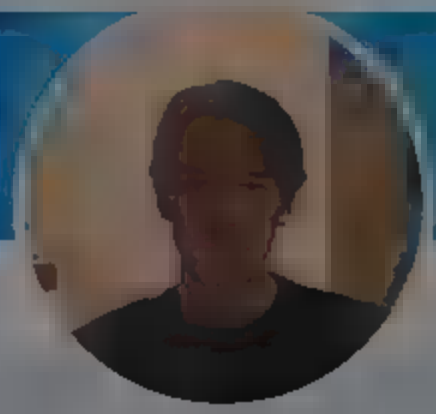
≋★▮▮▮▮★≋ @TechClive · 2 Std.

Thank you again. I think part of the problem is the lack of transparency in terms of the Labs testing standards/procedures. eg. For Pillar 2, are confirmatory test processes carried out for positives? From that, what is the % of FPs? What are the stats for CTs per +ve result?

1 1

Yardley Yeadon
@MichaelYeadon3



Folgen

Antwort an @TechClive

Good question, on Pillar 2, it's a state secret. Literally won't tell us, Ct, false positive rate, QA/QC, retest weak positives yes/no...
Actually inside info is NO to retest
So running max Ct & not rechecking
ONS is different. Lower max Ct & they DO rerun weak positives

I'm a scientist so I've no problem using the full range os techniques, including PCR.
However, industrialised molecular biology is out of control & delivers results which we know are unreliable.
You'd expect the same discipline from Pillar 2 mass screening as ONS prevalence.

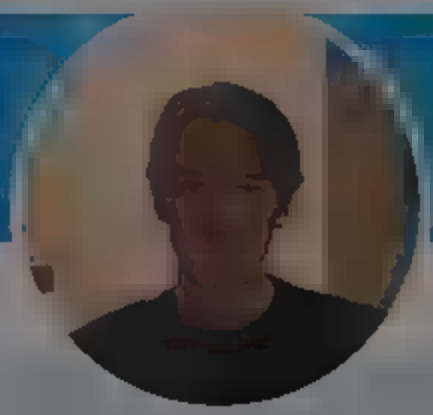
I've explained that the threat from this ordinary virus has gone.

You're much more likely to die from 'flu because vaccines are poor & there's no immunity.



I'm sad most are willing "to go gentle into that good night".

Think of the killing you're supporting by locking down.

Antwort an @GMB

Absolutely NOT. Kids will lose both education & socialisation. The former might be repaired but the latter?
Kids don't get ill with this virus. Flu is 10x more likely to do that.
Not a single teacher has been made ill by 'covid19' caught from a pupil.
See Scandinavia for details

So, we know that false diagnosis exists & I claim that, in the summer, it was at least in the mid-90s%.
Virtually NONE of the positives were 'real', then.
Don't we need to know what it is now?
Because if it's just a few % points higher & there are no 'real' cases now, either.

Hugely important. This is the key graph from Sat night lockdown press conference, shown to a primetime TV audience of 15m. It suggests up to 4,000 daily Covid deaths. But now, gvt is backtracking - refusing to explain the graphs, or publish the studies they came from.

sarahknapton @sarahknapton
The government is refusing to tell me what models each of these lines represent. They have shown a graph at a national press conference that they are refusing to release the key for. It's extraordinary.

216 830 1,8 Tsd.

David Levan @DavidLevan15 · 4 Std.
Of course it's tosh and deaths will never reach 4000 a day. In fact if people like @MichaelYeadon3 are right the pandemic was over after the summer and cases will fall steadily over the next month or so. How convenient for the govt who can then claim success for the lockdown.

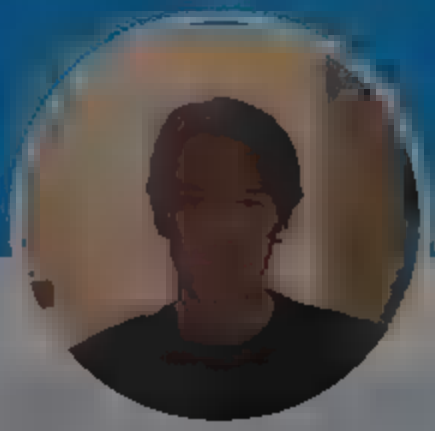
The number of ‘respiratory deaths’ is too low for there to be a full blown pandemic sweeping the country as SAGE’s models, heat maps & projections imply.



I don’t understand why this fact isn’t a major problem for those contemplating completion of the destruction of our nation.

Consider how easily “excess deaths” get created when the norms of the practise of medicine get replaced by tick box remote triage.
One has to hold you won’t one day be triaged to negligent death.

> **My older patients were to be left at home to sink or swim**
>
> As it happens, such was the lack of community cases of clinically unwell Covid-19, I never had to use the triple therapy. The closest I got was when a very feverish lady in her 80s was being left to probably die of a severe sepsis. She was refused hospital admission. At that time, I was not allowed to see her, as we had a dedicated coronavirus “red hub” to remotely triage queried coronavirus cases to. Its guidelines had concluded temperature equated to coronavirus, which in turn equated to no hospital access allowed for over-70s. This was my third experience of what was now a reeking stench. Fortunately, her home-help called me to notify me of the ensuing danger. I assessed the situation remotely and concluded that the clinical logic of the red hub was wrong. The most likely cause was line sepsis (she had an in-dwelling feeding line in a major blood vessel). I spoke to the red hub and the hospital to explain that the guidelines were fatally negligent. They took her in, and line sepsis it was. This simply required a new line and intravenous antibiotics. She survived to re-join her husband, but how many are still dying of perfectly treatable, potentially fatal illness?

Hi Michael. Would you agree that mass testing entire cities at regular intervals are essentially allowing the formation of a society where you have to prove you're not 'disease ridden' in order to take part? I'm so surprised how this doesn't worry people to be quite honest.

1 2 9

YCDIN @YCDIN1 · 55 Min.
It does worry me. This is Martial Law by the back door. Bringing the military into the towns and cities of this country, knocking on people's doors is the most shameful thing that has happened in its history and those responsible will pay.

Yes.
It's terrifying
This is an ordinary & stable virus
I believe as a country we're at community immunity with exceptions en route in weeks
This is worst case. We might already be there because no excess respiratory deaths is a bit of a problem for anyone claiming a pandemic

The Government are about to shut the country again
We've just learned that they do not know what fraction - if any - of the positive results are genuine.
The FPR in some test runs could be very high & they can't know it. How can LD#2 be justified??

> **Yardley Yeadon** @MichaelYeadon3

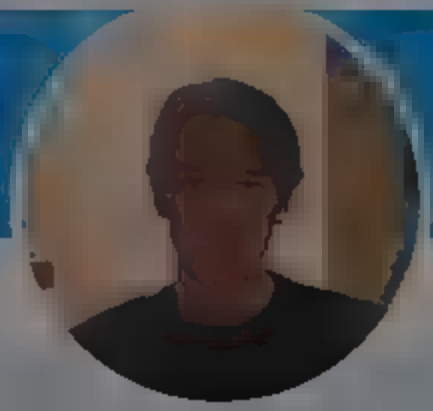
Frustrating.
Think this is better!

178 3,1 Tsd. 4,7 Tsd.

Helena Windsor @4TheGreenBelt · 4 Std.
There are many reasons why SAGE is wrong & there are better ways to handle the pandemic than another lockdown but lower than typical deaths from respiratory illness is NOT one of them.
Deaths SHOULD be lower- side effect of measures to prevent Covid spread

Yardley Yeadon
@MichaelYeadon3
Folgen

Antwort an @4TheGreenBelt @queenbeeof90



Well, if there was ANY evidence that such measures worked I might buy that. Maybe not. Recall is Severe acute respiratory syndrome virus. If it's killing, respiratory deaths would increase.

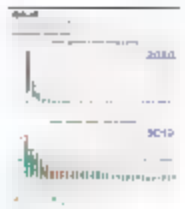
Antwort an @Jobst_Liebau @aphoreo und 2 weitere



You need to know operational false positive rate & prevalence in order to know the positive predictive value.

If for example the OFPR is 2% & the prevalence is 0.5%, ignoring false negatives for ease, you've a 20% chance of having Covid19 if you test positive.

In the next few hours, I will be making available all the reasoning & DATA that tells us that lockdown is simply not even indicated.

We are NOT in a public health crisis related to covid19 & there is no objective data suggesting such a crisis is near at hand.

#PandemicIsOver

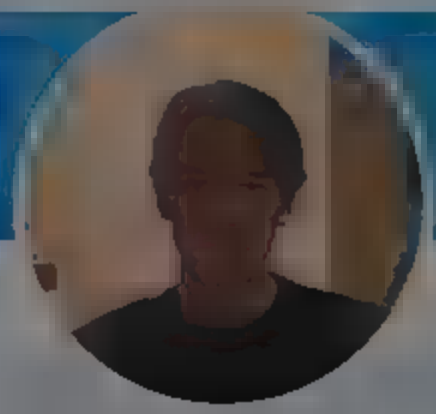
Vastauksena käyttäjille @bfishbfish ja @DrSiYoung



What a stupid comparison.
Covid19 as a public health threat in Europe & most of the world has either gone away (eg no longer in top ten leading causes of death) or is converging on it.
Many don't appreciate how wonderfully effective & protective human- & community immunity is.

Simon Young @DrSiYoung · 44 Min.
You've misunderstood, any positive signal that crosses the threshold beyond 35 cycles will be classed as an unclear result and probably retested. The PCR reaction is run to 45 cycles so that you can clearly see what is going on. Positives will only be confirmed below cycle 35

1 1 4

Andy @weareawake1 · 40 Min.
Another reply with no data or evidence to backup the FPR or asymptomatic spread.

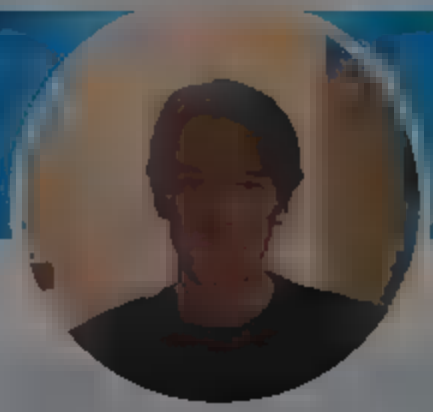
3

Simon Young @DrSiYoung · 6 Min.
Obviously the data you speak of is still being collected, only when things are done will anyone have the definitive answers. Not sure where you get 86% asymptomatic but imho there are asymptomatics spreading the virus

1 1

Yardley Yeadon
@MichaelYeadon3

Folgen



Antwort an @DrSiYoung @weareawake1 und 2 weitere

I'm not convinced that asymptomatic transmission is important at all.
The reason is plentiful supply of virus is required in order to infect others. Such infection intensities always cause symptoms.
Not saying never happens. Am saying it's a bit part actor on the drama.

Dreadful. As close to lies as I've seen. Truth is THEY DON'T KNOW WHAT FPR IS. They've never measured it. That means they've no idea whether 99% of recent positives are genuine, or 1%. Either is possible. Far lower FPR than I've seen elsewhere w PCR would account for ALL 'cases'.

Andy @weareawake1 · 1 Std.

What about the cycle rate used? Plenty of evidence that anything over 30-35 cycles is not fit for purpose. We keep hearing we are using 45?! Why can't they tell us what the FPR is? What about 86% of positive tests being asymptomatic. How likely are these + to be infectious?

1

Simon Young @DrSiYoung · 51 Min.

You've misunderstood, any positive signal that crosses the threshold beyond 35 cycles will be classed as an unclear result and probably retested. The PCR reaction is run to 45 cycles so that you can clearly see what is going on. Positives will only be confirmed below cycle 35

Simon, you're probably correctly teaching what good scientific practice is.
But you're not correct about Ct & retesting weak positives anywhere except ONS, who I love. Proper, independent professional.
Mass testing has gone full rogue. Max Ct, no retests & no idea what the FPR is

Antwort an @TonyBurnetti @venivici27 @Balloux Francois

Immunity generally doesn't stop infection (clearly depending on how we define it! enough to be PCR positive? Sure) but generally does prevent illness. It would be a poor system if it didn't, as a rule, given the scores or 100s of viruses around us.

Gabor Erdosi @gerdosi · 1 Std.
SARS-CoV-2 persistence in the small intestine in 50 % of asymptomatic patients three months after infection is the truly remarkable finding of this study.

3 9 48

Prof Francois Balloux @BalloxFrancois · 25 Min.
This statement in the abstract is misleading. They could detect traces of the 'dead virus' in 3/14 and 7/14 biopsies with PCR and immunostaining, respectively. I'm involved in a project where my colleagues generated whole genome viral sequences from a >30,000 year old tooth ...

1 17

Gabor Erdosi @gerdosi · 21 Min.
"Particles with typical SARS-CoV-2 morphologies were found within intracellular membrane-enclosed vesicles consistent with coronavirus exit compartments in terminal ileum apical epithelial cells (Fig. 5e–h), suggesting the presence of intact virions."

1 4

Prof Francois Balloux @BalloxFrancois · 16 Min.
I doubt those are 'intact virions', then I have a visceral aversion to results based solely on microscopy. They must have tried to culture them; it would the obvious thing to do.

ground with a vaccine

1 1

Dr. Anthony Burnetti @TonyBurnetti · 45 Min.
I could be totally wrong though, it is possible that that can be prevented entirely

1 1

Achille Damu @achilledamu · 39 Min.
I see thx. I am trying to understand what would happen should we let the virus run wild for 2 years until a vaccine. Probably almost nobody would develop several severe forms but I guess we don't know whether mild/asymptomatic would be likely to develop a severe form afterwards.

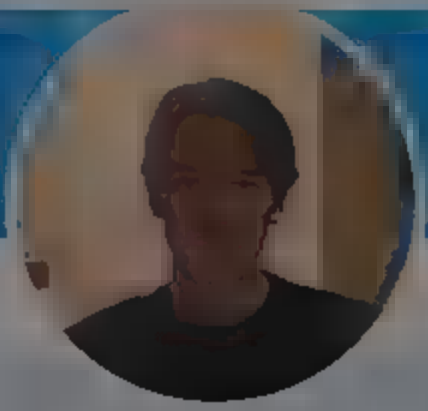
1

Dr. Anthony Burnetti @TonyBurnetti · 39 Min.
problem is that in a population with the age structure of the United States 1% of the population will die during that initial wild run and several percent including young people will be hospitalized and get long-term problems

3

Yardley Yeadon
@MichaelYeadon3

Folgen



Antwort an @TonyBurnetti @achilledamu und 2 weitere

Roughly 1% die yearly from all causes. Not to diminish the impact of the first wave. But it would be unprecedented if subsequent 'seasons' were not much less severe.
And I challenge the 1% estimate. In Europe population lethality is roughly 0.06% & this arguably unmitigated.

Britain the COVID #Casedemic#KBF#CancelTheLockdown @... · 7 Min.
If I understand correctly viruses don't actually do 'second waves' so this is most likely a new mutation call it Covid20, much like the flu changes every flu season, but thankfully less virulent and deadly?

1 1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @AntiWokeBritain @BorisJohnson

See "NextStrain" database of variants. No mutant forms with greater lethality have emerged. Normal branching & temporary dominance occurs, ultimately resulting in attenuation. No evidence of any other direction. No, unlike flu which changes fast, this is a stable virus.

Interesting, but isn't this what you'd expect, since both influenza vaccination & susceptibility to lethality from Covid19 are each independently associated with older age?
That correlation for me doesn't cause immediate concern. But of course close monitoring is essential.

It's not possible for a so-called "second wave" to have greater lethality than the initial exposure of the population. Literally not possible for what is claimed to be happening to be true.
Once our leaders & advisors LIE in ways which cause thousands of deaths & ruin, ask WHY??

42 279 655

Britain the COVID #Casedemic#KBF#CancelTheLockdown @.. · 12 Std.
If I understand correctly viruses don't actually do 'second waves' so this is most likely a new mutation call it Covid20, much like the flu changes every flu season, but thankfully less virulent and deadly?

Antwort an @AntiWokeBritain @BorisJohnson

No. It's bad data, artefact of PCR test which has never been characterised for false positives.

Therefore someone describe how it's possible to claim that ANY positives are genuine.

I'll wait.

Antwort an @sinichol @BouvierJourno und 5 weitere

Are they deaths which accord with covid19 as CAUSE?
Ignore PCR test as it's utterly broken.
They're not, are they?
Excess deaths are due to reduced access to NHS for 6mo+.
This isn't a wave, but a policy decision. You must look for yourself & imagine possibility that Govt lies.

Is PCR test for Covid19 reliable? I've asked to see the validation & operational false positive rate. We've now been told "not been determined". Could be anything, 1%, 10%, 100%.
The paper is on a PCR false positive pseudo epidemic of whooping cough. Not a single person had it.

Pertussis Pseudo-outbreak linked to specimens contaminated by Bordetella pertussis DNA From clinic surfaces

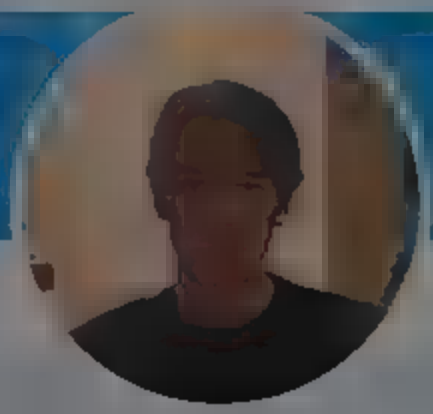
Abstract



Background and objectives: We investigated a pertussis outbreak characterized by atypical cases, confirmed by polymerase chain reaction (PCR) alone at a single laboratory, which persisted despite high vaccine coverage and routine control measures. We aimed to determine whether Bordetella pertussis was the causative agent and advise on control interventions.

Methods: We conducted case ascertainment, confirmatory testing for pertussis and other pathogens, and an assessment for possible sources of specimen contamination, including a survey of clinic practices, sampling clinics for B pertussis DNA, and review of laboratory quality indicators.

Results: Between November 28, 2008, and September 4, 2009, 125 cases were reported, of which 92 (74%) were PCR positive. Cases occurring after April 2009 (n = 79; 63%) had fewer classic pertussis symptoms (63% vs 98%; P < .01), smaller amounts of B pertussis DNA (mean PCR cycle threshold value: 40.9 vs 33.1; P < .01), and a greater proportion of PCR-positive results (34% vs 6%; P < .01). Cultures and serology for B pertussis were negative. Other

Interesting, but isn't this what you'd expect, since both influenza vaccination & susceptibility to lethality from Covid19 are each independently associated with older age?
That correlation for me doesn't cause immediate concern. But of course close monitoring is essential.

As far as I understand it's always been standard with PCR to retest a postive especially with a low prevalence virus and especially if there are no symptoms. This is a good read if interested.

That was certainly a factor in the New Hampshire PCR false positive pseudo epidemic of whooping cough where no patient, ZERO, had pertussis by culture. All PCR positives there were false ie 100% FP. Investigation showed whole episode was down to bench contamin. w ref sample.

Obv spring pandemic was real. All I'm saying it's gone or subs gone now. Here's how it can happen even when no pressure to cheat. Now we know Govt has no FPR data, must suspect all PCR data til proven reliable. Look at classic symptoms instead. Agreed?

> occurring after April 2009 (n = 79; 63%) had fewer classic pertussis symptoms (63% vs 98%; P < .01), smaller amounts of B pertussis DNA (mean PCR cycle threshold value: 40.9 vs 33.1; P < .01), and a greater proportion of PCR-positive results (34% vs 6%; P < .01). Cultures and serology for B pertussis were negative. Other common respiratory pathogens were detected. We identified factors that likely resulted in specimen contamination at the point of collection: environmentally present B pertussis DNA in clinics from vaccine, clinic standard specimen collection practices, use of

I agree that the FPR is important, but what is just as important is what is the non-infectious positive rate. If the Govt can't, or won't say, out of the positives produced, how many are non-infectious positives, it's game over. It will be obvious they're just winging it.

I was careful & highly motivated not to screw up as big runs were 20h long, incl fresh sample acquisition at dawn 100miles from lab, then to lab to start the day, finishing midnight. It's impossible not to make many errors. Mine were easy to see bc of the method (RIA).

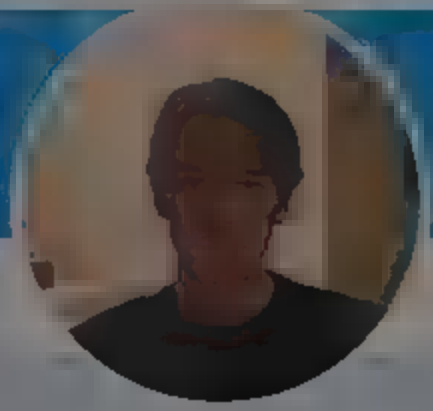
The reason for the test is to ascertain whether you currently have coronavirus. This is so that you can:

- take the right steps to look after yourself
- protect others
- potentially reduce the amount of time for which you have to self-isolate.

The test is a swab of your nose and throat undertaken at one of the Trust testing sites. The test is not 100% accurate; at present it is thought to detect approximately 70% of coronavirus' infections. A negative test does not mean that you stop self-isolating if you have coronavirus symptoms.

Tests are completely voluntary. By agreeing to the test you also agree to the result of the test being used as described below.



Once you have taken the test, your sample will be analysed in the Oxford University Hospitals NHS Foundation Trust (OUH) Microbiology Laboratory and your results uploaded to your records in the EPR system. You will be informed of the result within 48 hours (positive, negative or inconclusive) by a senior clinical staff member of the testing team using the telephone contact you have provided.

Healthcare staff with positive results should follow this advice:
www.gov.uk/government/publications/covid-19-management-of-exposed-healthcare-workers-and-patients-in-hospital-settings

Further return to work advice is available on the Frequently Asked Questions section of the Trust COVID-19 Internet page: www.ouh.nhs.uk/ staff-faq

Household members with positive results should follow this advice:
Stay at home: guidance for households with possible coronavirus (COVID-19) infection

Question was on NW though, not NE? I thought the same until I dug deeper. NW was actually the hardest hit region of the entire country by mid-May in terms of mortality. I don't think transmission/suppression is the reason for recent outperformance. I think demographic factors.

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @RealJoelSmalley @ClaireAJones2 @Sennett_AR

Exactly, Joel. I recall London for example has a demographic so distinct from rest of U.K. that I once heard someone observe it might as well be a different country.
So caution using excess deaths per million etc alone in comparing regions.

Antwort an @Spencer_marsh

There is a storm of testing going on. An extraordinary amount . I don't accept the definition of a "confirmed case", meaning "PCR test positive" as of any relevance at all. In other words I don't need to explain the results of PCR testing as they won't release Ct values.

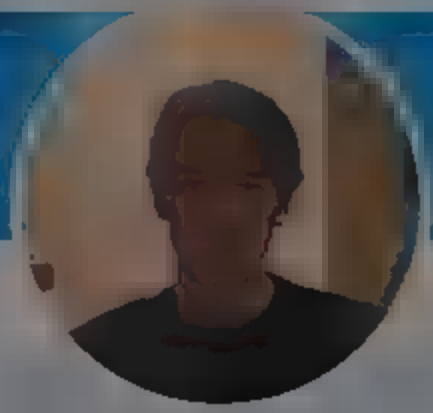
Antwort an @jiggli



Extremely kind, there'll be time enough to write history later.
Personally, as Govt has told us they don't have the data even to guess at what % of positives are genuine & which false, someone should reach for its Big Yellow Handle & shut down the UK's entire P2 testing system.

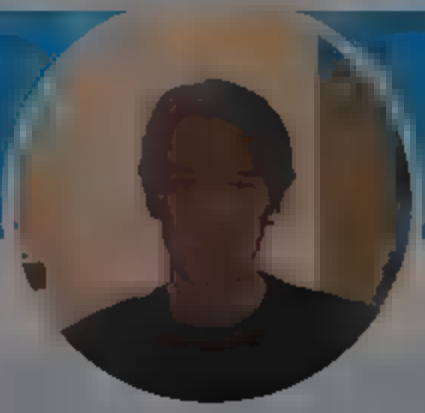
Is there a way to view the equivalent graph for 2019?

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @HelenTeaPot



I'm no data expert but I think yes & you just need to enjoy hunting!
Key thing about graphs like this is the baseline IS the last few / five year averages.
Now, if we can all see what London is like now, do we now accept that infection makes you immune & community immunity is in?

David Priestley @spiritedlydave · 7 Min.
My figures suggest high immunity already in many areas of London. Based on known deaths, population, age distribution and IFR estimates. Brent 38%, Newham 37%, Hackney/Haringey/Lambeth 33%.

1 1

Yardley Yeadon
@MichaelYeadon3

Antwort an @spiritedlydave

V interesting. Whats the basis of those estimates, pls?
A colleague estimated up to 60% prior immunity in a sample of London's care homes.
Not surprising if when hearing "novel virus", instead of running around in panic, you instead ask how similar is it cf everything else. Chill

... any activities required for the rental or sale of that property".

This seems to me a surprising activity to keep open, given LD#2 is proposed initially to last 1mo.

It's almost as if, without telling us, that SAGE has already decided it's going to be very much longer.

I agree. I have tried my best to show that Lockdown #2 is wholly superfluous, based as it is on a prediction by SAGE which I'm absolutely certain is wrong & worse, known to be wrong by several SAGE members. No, I don't know why this has happened.

I feel affronted that people working on policy in relation to a covid vaccine are a group of anonymous people.

Because we don't know any of them but Dr Bingham (who I know slightly in a professional capacity), how can we be assured that there are no conflicts of interest?

Gabriel Pogrund @Gabriel_Pogrund
Bingham's conduct matters because of wider concerns about consultants in Whitehall, personal appointments and transparency

Tomorrow, for instance, we reveal that the membership of the...

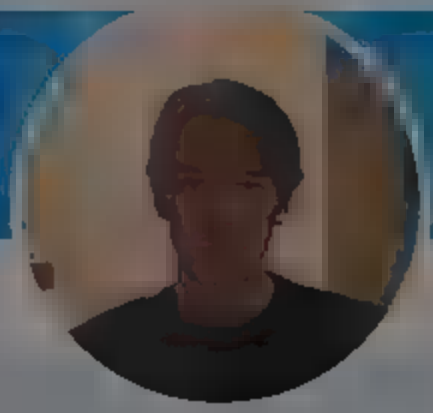
I've seen lots of these. Until today, my favourite one was about the loss of a beloved Suzuki GT750. His officers obtained a GS750 instead. It's funny if you owned bikes in the 1970s. Honest.



This version is right up to date & is about the pandemic.

Dr Mike Yeadon & Dr Clare Craig FRCPath have a detailed dossier demonstrating that the U.K. pandemic concluded in mid summer & has not returned. The so-called 'cases' arise from a 'PCR false positive pseudo-epidemic'. Let us know when you're ready to talk.

GP I just interviewed for Planet Normal podcast says they're on standby to vaccinate 8am to 8pm every day from start December, even including Christmas and Boxing Day.

She would not advise any healthy under 40 to have such an untested vaccine. @LiamHalligan

Antwort an @allisonpearson @LiamHalligan

One Qu: did your GP ever study medical ethics?
To a first approximation, 2/3rd of the population have natural immunity. We don't know who these are & who aren't. Of the others, only the vulnerable have a medical need for vaccine. Evidence of thought about this wld be reassuring.

On the Pfizer COVID-19 vaccine: publishing interim results through a press release is neither good scientific practice nor does it help to build public trust in vaccines. An announcement should come with full publication of a peer-reviewed research paper in a scientific journal.

196 1,6 Tsd. 6,2 Tsd.

BiotechObserver @BiotechObserver · 8 Std.

Clinical trial Topline results are always published in press release first. It takes many months to get through the peer review process and all the bullshit. I've yet to see a topline announcement by a company be completely inaccurate compared to what is later published.

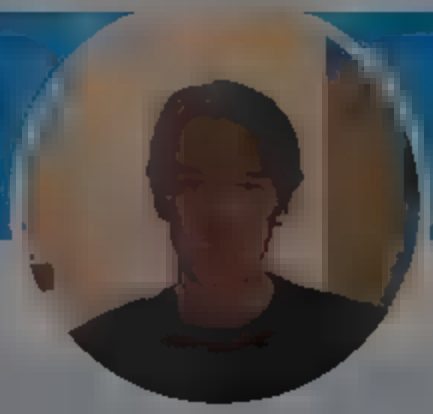
Antwort an @BiotechObserver @richardhorton1



Perhaps. But what does the statement mean when applied to the real world?
I'm certain it doesn't mean what Pfizer is implying. No one cares that mild 'cases' are reduced 90%. By how much are severe 'cases' reduced? Has this even been studied?

By the way, I do try to admit when I'm wrong. I do think I've wrongly used "world IFR" to estimate numbers of infection in U.K. because we're older. Let me reduce that to 15%. Fortunately, I've under-estimated prior immunity. Let that be 50%. Result: unarguably at herd immunity.

Luckily for us both here, there are but two key values.

What % prior immunity do you think most likely? There's lots of data. If you choose 0, like SAGE, justify it.

Several methods available to estimate % infected. Your value is what? If it's 7%, expect polite derision.

That's quite naughty. What that tells us is that what's just been press released is the result of the trial. I don't think it's even an IA (interim analysis) because these, too, are part of a protocol. It's....unusual.

Antwort an @MichaelYeadon3 @simondolan

I'm wrong about this. According to a press release, it is indeed an Interim Analysis.
So it's not 'naughty' & my sincere apologies for any uncertainty caused.
Rather than delete my message, I'll leave it, with this apology. I screw up occasionally.
When I spot that, I apologise.

An honest human?

You are rare as hen's teeth. 😃

But...given that most of Gen Pop aren't familiar with scientific research, perhaps splurging dubious statistics all over the front pages is, at best, 'irresponsible'?

Almost the same stats as the Pfizer study. 21679 took placebo and 86 of them got C-19, so that's 0.4%. Ioannidis's paper estimated that 0.2% with C-19 die. So, that's 0.2% of 0.4% die. Decent approximation?

Allan Plaskett @allanplaskett · 26 Min.
Antwort an @MichaelYeadon3 @ClareCraigPath und 25 weitere
What did you think of Prof Sir David's 'demo' that the Cvd19-PCR FPR must, because test-positives fell to nearly zero last summer, be negligible (1 in 2,000)? He did not mention that a lower Ct may have been employed in the summer testing. (And we do not know that it was not.)

1

Alex Faulkner @hearthefalconer · 20 Min.
The 1 in 2000 rate was for ONS surveys based on testing a few people a day. Pillar 1/2 testing shows much higher rates, which Yeadon argues are mostly false positives.

I've argued for some time that the pandemic has long passed & the route back to normality is simple: cease pointless & error prone mass testing of the population (test properly in hospital).
As soon as we stop mass testing, we lose the mass false positives & life restarts.

Dr Clare Craig FRCPath @ClareCraigPath
Belgium reduced their testing. R rate plummets as a direct results. Deaths too. twitter.com/stevebrown2856…

Ah, thanks. So it's more complex than my initial thought, which was we might be seeing approximately the cumulative number of people who have ever been infected.

1 1

Dr Clare Craig FRCPath @ClareCraigPath · 10 Std.
I don't think it's that. It may be a factor but there are certainly others e.g. people in their 20s, men, other subpopulations, possibly other cold viruses bringing in seasonality.

1 3

Philip Westwell @PhilWestwell · 10 Std.
Thanks. "men are testing positive at a rate almost twice women in pillar 2 testing" - that's very striking! And all the more striking that (as far as I've noticed) it has not been discussed extensively.

I'm afraid that nothing is discussed properly because broadcasting guidelines introduced on LD day (to prevent irresponsible ideas) have continued & are repressive. It's impossible to get something like this even presented by the BBC, let alone discussed. Lord knows we've tried.

In pillar 2?? And if you can sequence virus genome why bother

21 2 2

Dr Clare Craig FRCPath @ClareCraigPath · 5 Std.
You bother because the whole country is being held to ransom at the moment. You bother because it is affecting people's liberty. You bother because even if there's real COVID in some samples we need to be correct in the ones with low volume poor quality RNA too.

25 71 476

Michelle Clay @microbigal · 4 Std.
Okay, I'll bite. What do you think the rate of false positive results is? Because my university has done 43,488 tests and only 14 have been positive. And I know for a fact there is secondary evidence of COVID beyond the PCR for at least some of those 14 positives.

13 4 14

Yardley Yeadon
@MichaelYeadon3

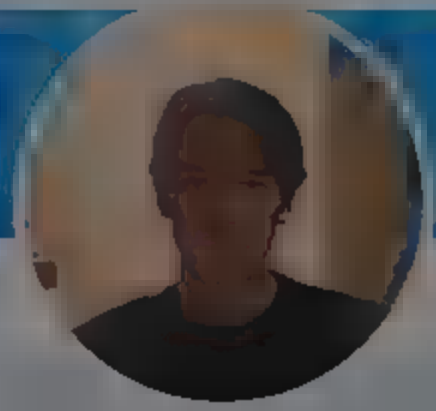
Antwort an @microbigal @ClareCraigPath @alanmcn1



It's important to appreciate that FP & their rate in one lab (especially if numbers are small) is no guide at all to the operational FPR in another lab which is running 300,000 tests every day. Most FP aren't intrinsic to the test but are introduced by accidental contamination.

President-Elect Wayyyyyyyyyy @SquidiaUK · 4 Std.

FPR is up to 4%. Add rushed testing, contamination, bad practice etc and it jumps up. Your lab is organised. Some have popped up with untrained staff and only cleaned once a week.

1 7

Arthur Foxache @OldMackIsBack · 3 Std.

Where are these filthy labs? I've been in a lighthouse lab, and it was filled with trained scientists and cleaner than a surgeons scalpel.

I saw those: in a heartbeat saw it was unsafe to assume any of the positives were reliable. Same interpretation as you. Whenever lab capacity was close to 100%, they got an unfeasible 10-11% positives.
That's a large multiple of positivity in hospital samples peak of spring.

If it wasn't so late & I so tired I'd outline all the other tricks in use to this day in U.K.

Here's one, which I assert accounts for ALL the claimed "cases", meaning there aren't ANY people with the virus now:

1 2

Yardley Yeadon @MichaelYeadon3 · 4 Min.
Government has admitted, in a written answer to Parliament, that they have NEVER determined the operational false positive rate.

This means they can't tell you what % of positive tests are genuine.

If the OFPR is just 10%, there are NO CASES. We've got plenty of evidence that..

There was virus & there were deaths, in the spring.

But ever since, it's all been a contrivance, manufactured lie.

And most people have fallen for it.

This has happened before. A "PCR false positive pseudo-epidemic".

See how you've been lied to. Happy? If not, find a way to signal your disapproval.

A medical diagnostic test so badly characterised that it should immediately be withdrawn.

Campaign for that, immediate withdrawal, and you'll get your freedom back inside 3 weeks.

Yardley Yeadon @MichaelYeadon3

Antwort an @chicago_sunrise @subsix848 und 2 weitere

Strictly you can't culture (grow in isolation) a virus. They only grow if they can invade living cells. So that's what we mean: "can you infect susceptible cells using a clinical sample?"
In this paper, the answer is no, in patients whose PCR was only positive if…

Antwort an @wealdengirl @RealJoelSmalley @dss66

The single, most effective intervention is to halt PCR mass testing.
If you can bring yourself to do that, pause PCR mass testing.
As track, trace & isolate is ineffective, what is the purpose of PCR mass testing?
Let's pause it for 1month.

Elon Musk @elonmusk · 1 Std.
What is the general population (no knowledge of symptoms) accuracy of a sars-cov2 PCR test & is it possible to generate a false positive if you simply run enough cycles?

4,7 Tsd. 6,9 Tsd. 43 Tsd.

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @elonmusk

Elon, there isn't one answer to this. It depends among other things on the number of tests run per day as a measure of stress on the testing system. Most false positives arise from handling errors in the sample processing stages. In U.K. I've seen test runs yield >10% positives.

I'm the same. I was like this at school & while I wasn't disliked, I wasn't popular.
Why like this? Partly I'm stubborn, sometimes to my own detriment.
In this case, it's a moral compass issue.
What's being done is harming & killing many people & there's no evidence of benefit.

4,9 Tsd. 7,4 Tsd. 47 Tsd.

Arco Hollestelle @PaperArconaut · 1 Std.

A PCR test replicates the Viral RNA in your body, you must have it for the PCR to replicate it. It's therefore not possible to get a false positive if you don't carry the viral RNA.

This is on people who weren't symptomatic. I'm happy to be corrected, but I don't think we ever got to 10% positivity in the population at the height of the spring pandemic.
If correct, it's then certain that such PCR runs are completely unreliable.

PCR testing was never intended to be used for population testing. It's intended to be able to estimate risks for vulnerable patients. Like making sure you don't put someone on chemotherapy right before they're about to have a flu. Mass testing is something we made up on the spot.

97 51 1,2 t.

PT @thampiotr · 31 min
There are more tests done, that's it. Your charts don't prove your point.

1

Dr Clare Craig @ClareCraigPath · 29 min
More tests account for the difference between spikes in the first graph. However, the discrepancy between deaths and excess deaths needs another explanation.

5 15

Joseph P Gardling @gardling · 21 min
This is pretty bonkers. There are several potential explanations if there even is a discrepancy. For instance, flu deaths could be much lower. Simply looking at those graphs and concluding "it's the PCR testing that's wrong" is facile and almost certainly incorrect.

Vastauksena käyttäjille @gardling, @ClareCraigPath ja 2 muulle

Data in U.K. goes to early November & the mismatch of positive tests aka “cases” & deaths is maintained.
Immunologists expected this. Most others appear to have deleted any memory of immunity.

positive pseudoepidemic.

Dr Clare Craig @ClareCraigPath
We are in a false positive pseudo epidemic

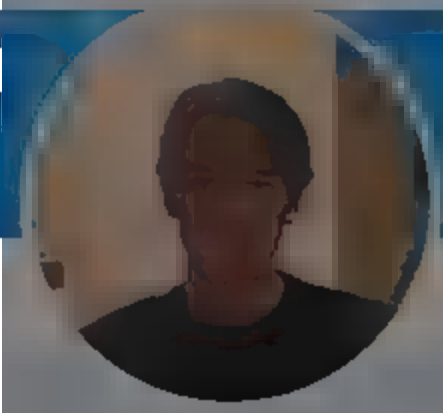
110 383 1,8 Tsd.

Daniel I @Intellectual_Po · 25 Min.
Back in the first wave testing was limited to only those hospitalised with symptoms. Now testing is available more broadly more cases are being detected. Nothing shocking there.

1

Daniel I @Intellectual_Po · 23 Min.
Death rates are still going up in Europe, and deaths peaked at 2-3 times the normal rate in the last wave. Deaths from this wave will peak 2-3 weeks after the peak of infections, like it did last time. In the UK it will take another 2-3 weeks after that to see in the stats.

1



Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @Intellectual_Po @ClareCraigPath @elonmusk

The deaths we are seeing at the moment in U.K. are quite unlike those in spring. They look like the deaths you'd expect if you restrict access to the NHS for 8months. Not typical COVID-19 deaths at all.

We are in a false positive pseudo epidemic

111 402 1,9 Tsd.

Jon Garfield @_jongarf · 2 Std.

As hospitalization rates surge, ICU beds max out and death rates rise, it's misleading and irresponsible to call it a "pseudo-pandemic."

3 9

President- Elect AUDIT Minnesota! #AuditAll50 @GiroSammy · 1 Std.

1. ICU is normally at 90%

2. Look at government websites tracking beds, news exaggerates

3. The flu magically disappeared so what's the matter

1 1

Jon Garfield @_jongarf · 36 Min.

1) ICU's are literally maxed out in some hospitals and patients are being transported to other areas, 2) data on bed utilization alarms scientists and medical professionals—follow the science, 3) flu rates decline b/c many people are staying home and social distancing.

Andrew @aj20000 · 42 Min.
Sick patients take about 4 weeks from infection to die, excess mortality data lags by weeks. A jump in infections in October may not start appearing in published excess mortality data until January. NYC April excess mortality peaked at 600%. Probably was not made up.

I don't know nor would ever comment on US. In U.K. we're getting data in near real time. Certainly total deaths as provided to EuroMOMO are no more than a week in arrears.
An advantage of EuroMOMO is that being very simple (count of deaths & age only) is it's not interfered with.

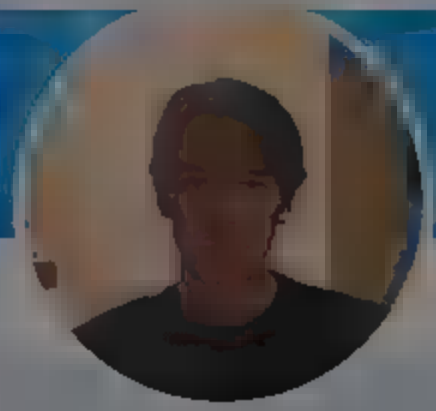
Simon Dunn @_SimonDunn · 1 Std.

Well I think as a starting point we can ascertain they are ≤0.4% by proxy of the lowest positivity rate in the summer?

1 1

Yardley Yeadon
@MichaelYeadon3

Folgen



Antwort an @_SimonDunn @HealthPolice1 und 2 weitere

No. I understand why you say that, but it's wrong. Most of the errors in PCR mass testing arise in sample processing & are very contextual. So what was happening in summer tells you nothing useful about now. You don't even need PCR results to see Liverpool LFA results = no virus.

Jeremy Hunt @Jeremy_Hunt · 10. Nov.

We have sped up the processes, but not - according to repeated assurances from ministers - in any way reduced the safety requirements. That I think is why whilst we know the new Pfizer vaccine works, it has not yet been declared safe.

> **Natasha Forder** @NatashaForder
> Antwort an @NatashaForder @Jeremy_Hunt
> Therefore, how is it possible that this vaccine can be fully tested and deemed safe for use, in such a short space of time?
> What is different about this vaccine compared to other vaccines that take longer to test?...

Mr Hunt, when you say ‘works’ you know that the reduction is just of becoming PCR positive? No data yet on reduction in ILLNESS. Not at all the same. So pls mind your words when describing it. I’ve heard newsreaders leap to 90% reduction in illness. That’s dangerously misleading.

Also do you know what the vaccine effectiveness is for the age group most adversely affected by covid-19, 70 plus, and also those in the high risk category?
Kindest regards,
Natasha

The Statistics Guy Jon @Jon_statistics · 7 Std.
Using averages which is what ONS have done ignores population growth and implies 2020 is breaking records in weeks when it isn't.

This also shows you that deaths are broadly following a NORMAL seasonal pattern at present.

3 18 57

The Statistics Guy Jon @Jon_statistics · 7 Std.
This also shows that deaths from, of, with covid as underlying cause are taking people who would likely have died from another cause at this time of year anyway. Likely flu or other respiratory diseases.

At this time there is no 2nd wave of deaths overall.

5 25 115

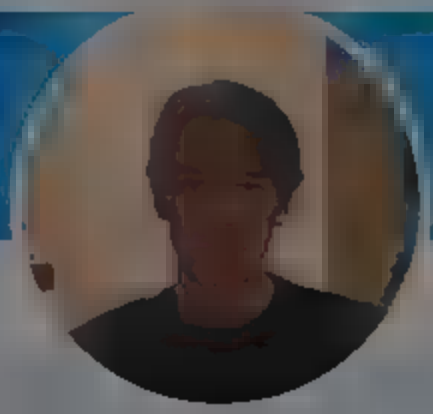
Mark Stronge @markoftec · 7 Std.
We are on the upper edge of average due to lockdowns. Lockdown induced deaths are inflating all cause mortality.

1

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @markoftec @Jon_statistics



I'd prefer the catch-all term "measures". One thing we can be sure of, and it's that reduced access to the NHS & healthcare broadly is DEFINITELY responsible for some deaths that would otherwise not have occurred. To disbelieve that, you'd need to disregard the good the NHS does.

Sara @indymeansindy · 9 Std.
Do you actually appreciate at all how Covid19 impacts the running of a hospital?

It's all very well spouting off your theories,and they may very well be correct to a point, BUT you clearly have no idea about the impact of too much Covid19 in hospitals-which is your blind spot.

Antwort an @indymeansindy

Sara, I don't doubt it gathers up resources. It now must not, for almost all "cases" are misdiagnoses.
The pathologists evidence is incontrovertible. In the spring we had a pandemic. Now it's a testing artefact. Liverpool lateral flow test proves this. Please look around you.

Incredible accurate.
Guess who the so called excess deaths are?
Our relatives & maybe some of us. Restricting access to the NHS for eight months does that.

Vanessa Gray @VanessaGray999
Antwort an @talkRADIO @TVKev

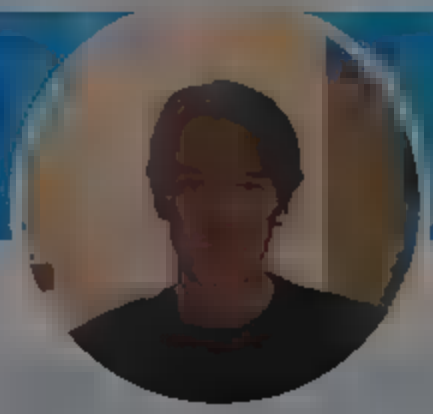
54 950 3,1 Tsd.

Allan Plaskett @allanplaskett · 17 Std.
Newsnight feature tonight asserts 57% and 0.3% as lateral-flow-test parameters (true and false positive respectively).

1

Yardley Yeadon
@MichaelYeadon3

Folgen



Antwort an @allanplaskett

The number of positives actually obtained (0.5% 2nd day) are essentially the same as the 'production' false positive rate (0.32%). An in-field FPR for that test, used by disciplined in experts of <1% would be heroic.
There is no virus. This is good news & also what's expected.

One gain will be the rapid re-emergence of our country. It must be now.

4. It blinds us....(B). When 60,000 'pregnancy-style' tests in Liverpool, UK's hotspot, show us there's no virus in the city, the media just misses it & moves on. I've reviewed the spec. These are very sensitive tests. False negatives are relevant only at high virus prevalence.

I feel the need to apologise for the corruption in the field of endeavour I've made my career: life sciences R&D. Corruption isn't automatic or intrinsic to scientific research. Unless I've had my eyes closed I'd say it's uncommon. But once money is involved, some are perverted.

Thanks. While it's true PCR is VERY sensitive, we need only enough sensitivity to detect real infections. Checking globally, they're ALL running PCR at far to great an amplification. That's bad: we find 'positive' huge numbers who aren't infected. PCR mass testing must cease.

(Submitted: 13 May 2020 – Revised version received: 13 September 2020 – Accepted: 15 September 2020 – Published online: 14 October 2020)

Abstract

Objective To estimate the infection fatality rate of coronavirus disease 2019 (COVID-19) from seroprevalence data.

Methods I searched PubMed and preprint servers for COVID-19 seroprevalence studies with a sample size ≥ 500 as of 9 September, 2020. I also retrieved additional results of national studies from preliminary press releases and reports. I assessed the studies for design features and seroprevalence estimates. I estimated the infection fatality rate for each study by dividing the number of COVID-19 deaths by the number of people estimated to be infected in each region. I corrected for the number of antibody types tested (immunoglobin, IgG, IgM, IgA).

Results I included 61 studies (74 estimates) and eight preliminary national estimates. Seroprevalence estimates ranged from 0.02% to 53.40%. Infection fatality rates ranged from 0.00% to 1.63%, corrected values from 0.00% to 1.54%. Across 51 locations, the median COVID-19 infection fatality rate was 0.27% (corrected 0.23%): the rate was 0.09% in locations with COVID-19 population mortality rates less than the global average (< 118 deaths/million), 0.20% in locations with 118–500 COVID-19 deaths/million people and 0.57% in locations with > 500 COVID-19 deaths/million people. In people < 70 years, infection fatality rates ranged from 0.00% to 0.31% with crude and corrected medians of 0.05%

A little worse than typical seasonal influenza
Some flus are worse than covid19
Some day ah but we have a vaccine v flu.
But only 3/10 years did they reach 50% efficacy vs flu
And each year, population is naive. With covid19 we've reached herd immunity long ago.

There is no way more than 10% in a sample were seropositive for SARS-CoV-2 in Italy back in September 2019. I think there is no way *any* sample was really positive other there back then, but this is just beyond incredibly, there is obviously something wrong with this paper.

6 2

Dieser Tweet ist nicht verfügbar.

Philippe Lemoine @phl43 · 2 Std.
You probably wouldn't have found as many seropositive people in a sample taken in Paris right after the first wave. I'm not even going to read this to be honest, it's obviously garbage, they must have mixed up sample dates or something, which reading the paper wouldn't tell me.

it's not a random sample though.

but yeah, still seems very possible the authors made an error that gave them this result.

1 1

Philippe Lemoine @phl43 · 1 Std.
Yeah, I know, but it's close enough from what I understand. There was plenty of studies with similar samples in places where hospitals were totally overrun, yet there wasn't as many seropositive people in them. If you have 14% of people who are seropositive in a sample of that

Philippe Lemoine @phl43 · 1 Std.
Yeah, I know, but it's close enough from what I understand. There was plenty of studies with similar samples in places where hospitals were totally overrun, yet there wasn't as many seropositive people in them. If you have 14% of people who are seropositive in a sample of that

2

Philippe Lemoine @phl43 · 1 Std.
sort, as they apparently claim was the case in Italy back in September, it should already be a fucking mess. There is no way people wouldn't notice something was going on in a developed country like Italy with active surveillance of pneumonia cases.

1 1

Koen @KoenSwinkels · 1 Std.
If they didn't realize there was a new virus in town, then they could have easily mistaken the symptoms for familiar viruses, no?

1 2

Philippe Lemoine @phl43 · 1 Std.
In developed countries, when people get pneumonia, they test for various known viruses. If they get a cluster of pneumonia for which they can't identify the cause, because samples don't test positive for any known pathogen, they're going to immediately know something is off.

I wouldn't believe him either. His reputation extends allegedly to believing in alien lizards. Importantly he has no understanding of errors in PCR testing nor in immunology.
I urge people to stay on verifiable science, not hidden motives.
The science is enough to show the lies.

Antwort an @JamesMelville

No. Almost no one is at risk from the virus. Theres nowhere near enough post dose safety info to make what you suggest an ethical starter. Compare risk from the virus for a 20yo. We can't say the risk from a vaccine is lower. So I disagree. Vulnerables only & with their consent.

Absolutely I take my flu jab and I've just had my pneumonia jab. I want a brand new type of vaccine to be, peer reviewed, fully tested, regulated and proven to have no issues. Then you can have my arm.

Antwort an @LibertyLins @JamesMelville

That will take years. If I was elderly & vulnerable I probably would want even an early stage vaccine as the risk of serious illness & death from the virus is appreciable. Others at lesser risks should demand a VERY much larger & longer term safety database. And I'm pro vaccines!

The dossier will receive the same intensive review as any other new medicine. I would guess you are aged under 40 and healthy. If so it will be 6 months before you are offered vaccination. That's a 10 month safety data base you can decide on

6

Yardley Yeadon
@MichaelYeadon3

Folgen

Antwort an @D16584667 @LibertyLins @JamesMelville

Problem is database is too short a duration & woefully short of subjects. Once you start dividing the database up & look say at young middle aged BAME nulliparous females with 1 prior immune condition, how many have you got?
Safety d'base enough to start, NOT mass vaccination.

Were MPs given full information about claimed (unusual) stresses on the NHS before the vote on LD#2?
ICU loadings weren't unusual for time of year (as I told you, 81%. Turns out it was 79%). MPs not told.
Oxygen use entirely normal. MPs not told.
No excess deaths. MPs not told.

Finally, where are the deaths? True, there's a time lag between community infection, hospitalisations, ICU stays and deaths. But one would have expected to see a rise in deaths by now – and it hasn't happened (Chart 2). The tiny increase in deaths to October 30th is all due to deaths at home – there are no excess deaths recorded by the ONS from respiratory disease.

Total deaths registered per week
England and Wales

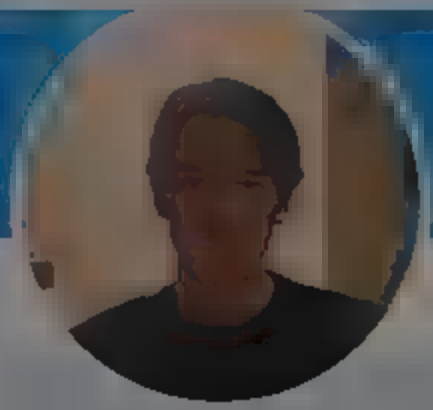

Chart 2

For clarity, I should say that Covid is a nasty infection. It can make people very ill and sometimes die. I certainly hope I don't get it. That said, I think I'm sufficiently informed about the risks to make up my own mind with respect to

He's immune but not much to do with the levels of circulating antibodies. That's not how acquired immunity vs viruses works: mostly T-cells. They've taken a virtual mugshot of pieces of the virus & several types of memory T-cells will sort out future infections without illness.

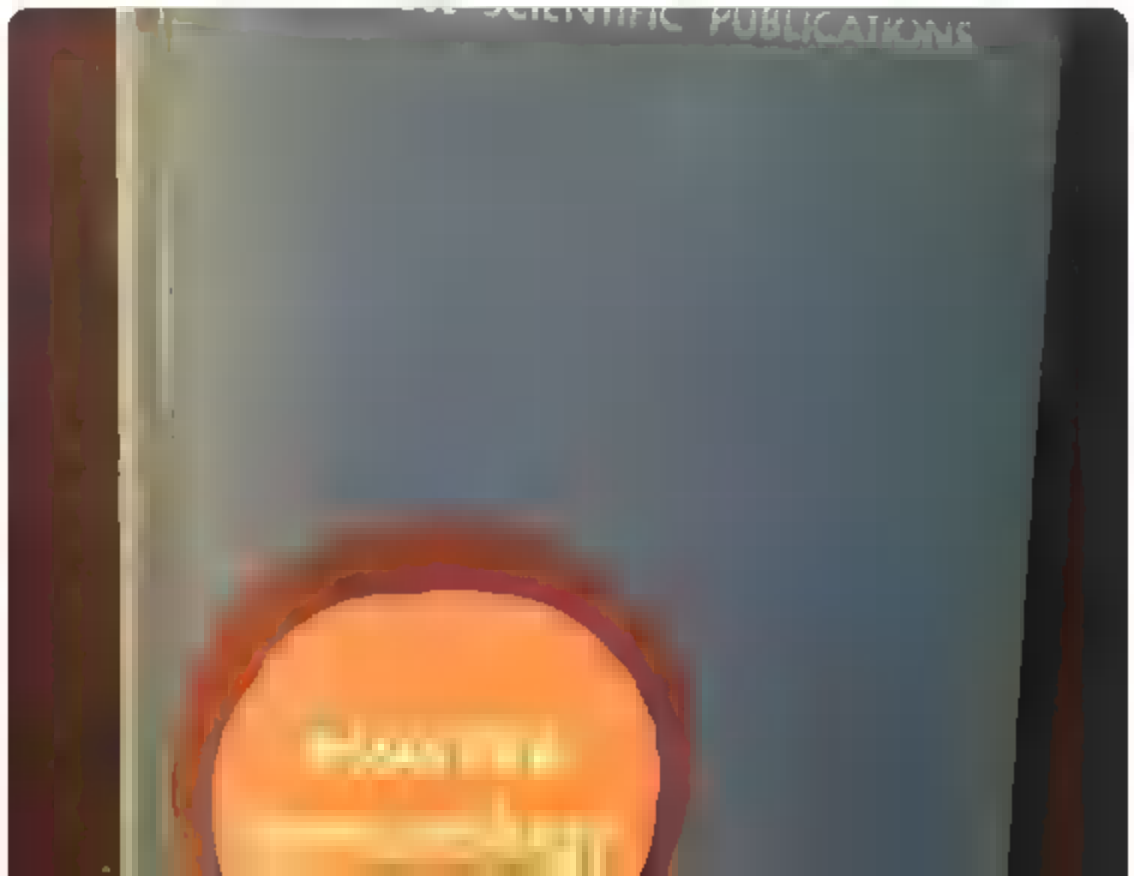
I think the really interesting thing here will be whether or not he develops symptoms again. If he doesn't this will be a positive sign that those who get infected twice are less likely to go on to develop symptoms again this ending much of the hysteria that surrounds this.



1

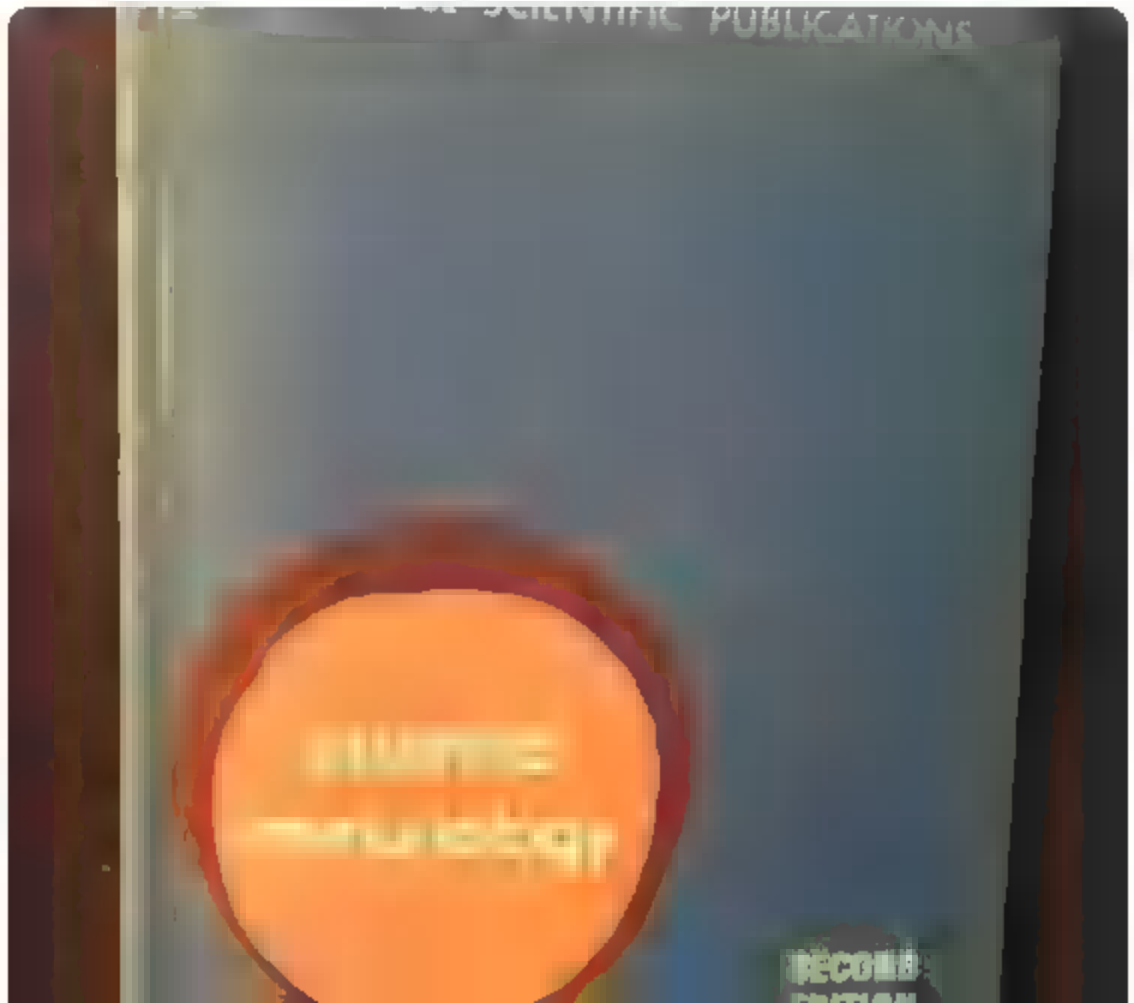
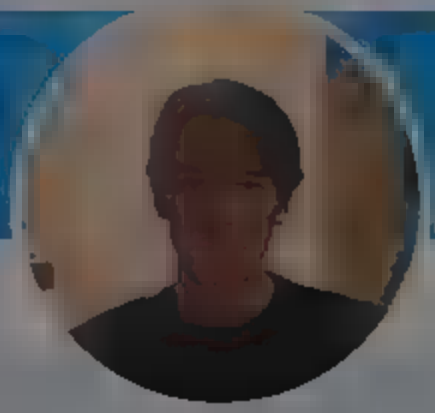
Its Bullsh#t....Why do we have to go through the charade of pretending that if you've had coronavirus you don't get immunity?



1 1

Yardley Yeadon
@MichaelYeadon3

Folgen



Antwort an @jimmykkk5 @Annemariealex

My undergraduate textbook says exactly that, you can't get reinfected & get ill (PCR re-defines what 'infected' means).
Prof Calum Semple of SAGE trained under Roitt, a giant of British science. I'm sure he's not forgotten his immunology lectures. Why not appear here & confirm?

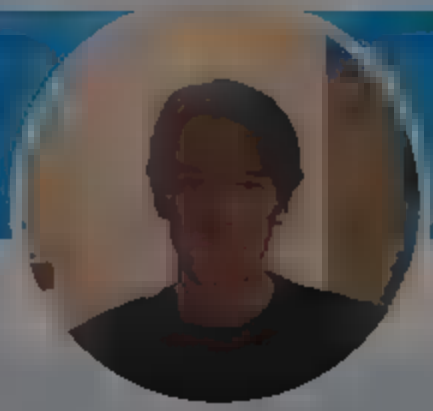
It's not antibodies but T-cells most important. There was panic recently that "antibody levels are falling, is immunity wearing off?". Wrong.
Antibodies are falling everywhere, because virus is no longer re-stimulating immune systems.



What does that mean for virus prevalence?

Antwort an @LisaB2328 @Annemariealex @Fox_Claire

Possibly. He was quite ill, we're told, months ago. Doesn't matter. His T-cells will remember the encounter for years, possibly for life. No vaccine required.
The T-memory response is robust & durable, still like a light switch in SARS patients from 2003 (& immune to -CoV-2).

To answer my own Qu, if you ran proper tests anywhere in U.K. now, 7mo after spring peak, you'll find low to no incidence. Like in 60,000 people in Liverpool, for example. Lobby to get your town tested. No virus. The beauty of immunology is it isn't opinion & it's not political.

... virus & recover freedom.
These are noninvasive tests, requires no complicated equipment that goes beep & needs a priest class to operate it (so you can't understand or challenge it).
I'm seriously thinking of buying a couple of towns worth.
If correct, end of emergency.

I demand we halt mass PCR testing. Everyone should campaign for this. It's the single action needed to save our society.
1. It's untrustworthy. Govt admits it's out of control: basic QC hasn't been done, ever. If was a diagnostic test in the NHS, it would immediately be stopped.

397 4,8 Tsd. 9,9 Tsd.

SAGE & modellers. When you built your 1st model, why did you exclude any % who had prior immunity to SARS-COV-2? Sections of it, known in Jan, are analogous to same in 4 common cold inducing coronaviruses. Why assume 0%? Is it so MPs couldn't argue & cause max fear? Not accurate.

Prof Francois Balloux @BallouxFrancois · 6 Std.
Unless it can be confirmed by far better evidence, I believe the claim of #COVID19 circulating in Italy in August can be safely ignored. The bulk of the evidence points to emergence of #SARSCoV2 ~Oct/Nov 2019 in China, and a spread to Europe (Northern Italy) in ~Nov/Dec 2019.
7/

12 57 217

Prof Francois Balloux @BallouxFrancois · 6 Std.
This is a typical case of much of what is wrong with science (and science reporting) in the #COVID19 era. Strong claims supported by flimsy evidence get widely reported without the necessary scrutiny and consideration of a wider body of available evidence.

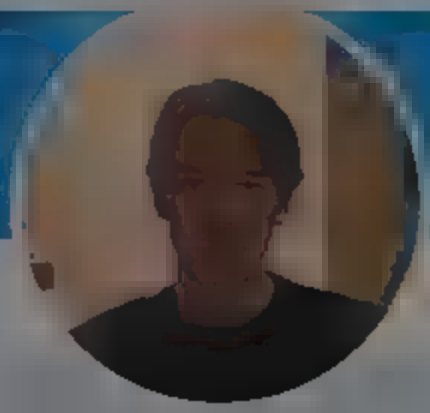
I agree with your written conclusions about virus itself & timing plus genomics.



Funnily enough, my initial assumption was cross reacting antibodies to something related to the 'novel' virus.

We've seen similar with prepandemic T-cells, with common epitopes traces to cold CoVs.

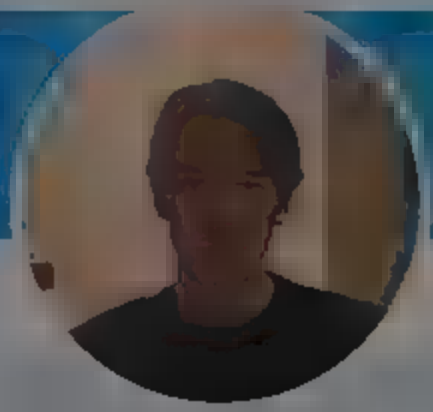
Antwort an @DianeLBW @BChairss @MrHarryCole

He can't have it. He's already had it.

That's how immunity works.

He cannot catch it nor transmit it again.

It's simple & has a common root: immunity stops virus multiplying in his body.



I hope this helps.

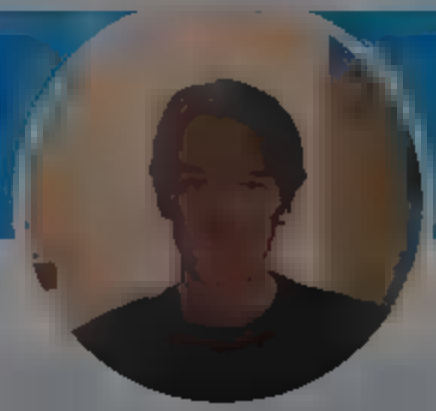
I'd read a review of 'culturing' the virus & running a PCR test.

Almost all positives <Ct25 got virus culture, Almost all with Ct>30 did not.

While Ct varies from machine to machine, positives at low Ct esp with symptoms are very likely infected & infectious.



And vice versa

Dear Dr. Yeadon

As a mathematician it strikes me that the "modelling" that they adopted was to assume the 2nd "wave" would be exactly the same SHAPE as the 1st.

The shallower initial stage of this 2nd anticipated "wave" thus dictated the absurdly magnified tsunami prediction.

2 3

Yardley Yeadon

The absolute certainty came through day one of the SAGE members started talking about "2nd waves". From that moment, I knew it was lies. Viruses do not do waves. No one on SAGE has explained why this is expected. Never been seen before. Despite me calling them liars, no response.

We know it's not Covid-19 despite positive PCR tests. Why so certain? Because Govts own seroprevalence (antibodies to this virus) have got LOWER all year from a peak in spring. If they were exposed to virus, antibodies would rise. Pop antibodies fell bc they're not seeing virus.

Sorry, I see you've made a logical but incorrect leap. Symptoms are nothing at all involved in diagnosing Covid19. The only evidence is a positive PCR test. That's a '*confirmed case'. 'Confirmed' is superfluous & misleading. Ditto 'covid19' death (in <29 days of positive test).

Medical staff use symptoms to guide their mental assessment & good old fashioned diagnosis. For reporting purposes, symptoms are not involved in case count, admissions & deaths. Medical cert helps, but only much later. Hence the joke about pos test then RTA death = Covid19 death.

Antwort an @ChrisFergy @agenda212030

What do you mean, none? There is definitely a virus & it's passage through populations in many countries caused an obvious spike in death. No, IMO the spring event was real.

It's been mass PCR testing in Lighthouse Labs that's enabled the 2nd wave (as these don't happen).

I'm a fan of properly developed vaccines in contexts where benefit to risk is self evidently positive.
Just a note of caution, same as with the previous vaccine development candidate: be aware that these aren't final results, but an 'interim analysis'. Data not all available yet.

> our vaccine can prevent Covid-19 disease, including severe disease," he said.
>
> Moderna added that it expected the vaccine could be shipped and stored for up to six months at minus 20C, and then remain stable once thawed for 30 days if refrigerated at between 2C and 8C. In contrast, BioNTech-Pfizer have said their shot must be transported at minus 75C and can survive in a normal fridge for only five days, making it potentially more complicated to distribute.
>
> Shares in Moderna rose 8.5 per cent to $97 in pre-market trading in New York, and S&P futures

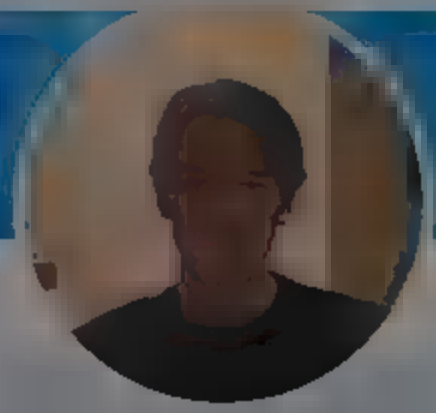
You're not claiming that 300,000 people/day are symptomatics?

Even in late summer that wasn't true: city streets were being leafletted.



What's the evidence now of your contention?

I'd argue it'd increase test centre prevalence by FAR less now, as lots of resp viruses around.

So 19 out of 20 it will be found if they're infected to the extent a virus culture would succeed (aka infected & infectious).

So, still zero, then. Weak positives are traditionally 'negative'. As can't culture virus from patient at high Ct.

But if the difference in positivity were to be slight, it would have truly substantial implications for everything. It's so easy to do. Could you support this, conceptually?

It's quite hard to read that when one whole part of your own family is seriously ill with COVID and life support is being withdrawn. Sorry but that's the reality. They haven't got standard respiratory illnesses - it's not that.

Antwort an @MichaelYeadon3

There are only 43 people identifed in the 2 studies which provide estimates of sensitivity from the Porton Down/Oxford studies of Innova which were asymptomatic, the rest had symptoms. Its not looking at mass screening at all - more like testing symptomatic and exposed people.

1

Jon Deeks @deeksj · 7 Min.

Agree that PCR testing can remain positive long after exposure - but when it is done in those with symptoms and/or known exposure the combination is more strongly diagnostic. I am not aware we are doing mass screening with PCR - certainly would bring different problems.

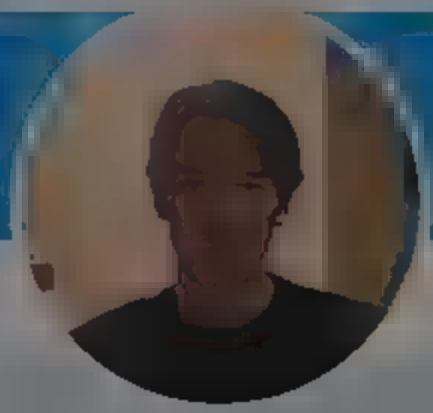
The IFR for healthy under 70 year olds is 0.05%. The average age of death with Covid is 82 in the UK.



It is not a 'potent threat' to anyone of any age and background.

Heartbreaking thing is some people are sitting there thinking he isn't lying.

PCR false positive pseudo epidemics exist. We've got one. When in a pseudoepidemic everyone thinks it's a real epidemic. But we don't have extra deaths. That's howling out for an explanation & there's only one. Is literally not a single person interested?

> **Yardley Yeadon** @MichaelYeadon3
> Look, I can't be more direct. We can't have a lethal pandemic sweeping the land, killing thousands of people & it NOT show up in the total mortality charts. Not unless someone is hiding dead bodies. And they're not. Its MISDIAGNOSES. Please wake up. It's not even new. twitter.com/michaelyeadon3…

They're slightly LESS loaded than normal for mid November.
Still no excess deaths.
So...those thousands of covid19 deaths this autumn are where, exactly, in this official chart running to early Nov?

Do you know how many tests that population had in total over last two days?
The fascinating thing about test related pseudo epidemics is that they vanish as soon as the aberrant test is halted.
Nothing else changes because nothing else is happening.

Caroline Gane @CarolineGane · 4 Std.

Like most sensible people I am in favour of vaccines, but not those which are rushed through. This virus is not deadly for most people it infects, therefore why should everyone be expected to take it? Maybe I, at age 66, should take it & maybe I will, but certainly not yet.

1

Antwort an @CarolineGane

I agree with you. I'm 60 & in good general health apart from one product of a medical mishap which is painful but not life-shortening. I'm a greater risk from many ordinary things going wrong yet being unable to be treated than from this virus (to which ~70% are now immune).

Doubtless the most important legal judgement in 2020.
Please read.
Court found abuses of process in illegal detentions & penned a devastating critique of the use of PCR as medical diagnostic.
The Dr says “Portugal may be small but it’s an EU member”.

A Portuguese professor and lockdown sceptic has sent me a long and informative email about a recent ruling by the Portuguese Court of Appeal which casts doubt on the reliability of the PCR test. It is a great tribute to the integrity of the Portuguese legal system that the Court seems to understand in considerable detail the shortcomings of the PCR test as a diagnostic tool, particularly when not used in combination with a

Martin Braml @MartinBraml · 4 Std.

That is simply not true! More than one third of Switzerland is in a strict lockdown, the federal government has imposed measures for Switzerland as a whole (e.g. limitations for public and private events, only four people dining in restaurants together, Clubs are shut down).

1 11

Stefan Homburg @SHomburg · 2 Std.

Indirectly, you are confirming my statement: No national lockdown in Switzerland whose situation is not comparable with that of Austria or Germany.

1 2

Martin Braml @MartinBraml · 2 Std.

I'm not confirming your statement. The recent decline in infections is a result of the measures. You suggest it's independent of the measures.

PROGRAMME ENERGIE 2021

Ouvrir

Moderna's vaccine can be stored for up to six months at -20C though it is expected to be stable for 30 days at normal fridge temperatures of 2 to 8 degrees Celsius (36°-46°F).

FATIGUE AND HEADACHES

Pfizer said vaccine was well-tolerated and that side effects were mostly mild to moderate, and cleared up quickly. The only severe adverse events experienced by volunteers were fatigue (3.8%) and headaches (2%) after the second dose. Older adults tended to report fewer and milder adverse events.

"These are extraordinary results, and the safety data look good," said David Spiegelhalter, a professor and expert in risk and evidence communication at the University of Cambridge.

I've spoken to that scientist.

He says that those labs could never run reliable mass PCR testing due to unavoidable contamination.

All their results are invalid.

I'm not of the view that there is a continuing public health hazard of any great magnitude. If we had a vaccine ready to go, I'd offer to the vulnerable only. Then stop. Otherwise risk/benefit doesn't make sense.

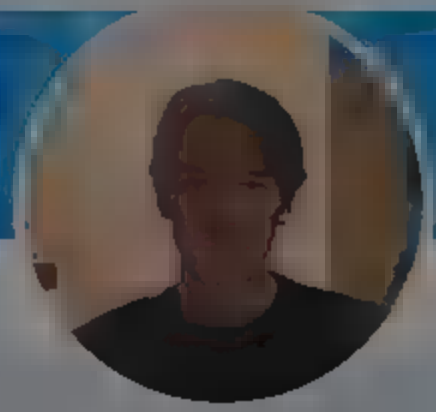
... become PCR positive?"
If so, that's DEFINITELY not the same as reduction in disease prevalence or severity.
Sorry, it's not. And you cannot infer real-world efficacy from reduction in a biomarker.
Surely there's more efficacy data than this?

1 1 1



Yardley Yeadon @MichaelYeadon3 · 5 Min.
I do hope so. Because if not, we cannot claim 90% or 95% reduction in anything important to people yet.
Come on, vaccine experts: more interpretation please!

...idea that there is a '2nd wave". None. These "positives" flow from "cases" all the way to "deaths". I'm simply pointing out that a label ("positive" in PCR) is NOT proof anyone has the virus, if the integrity of the sole testing system is in serious doubt, which it is.

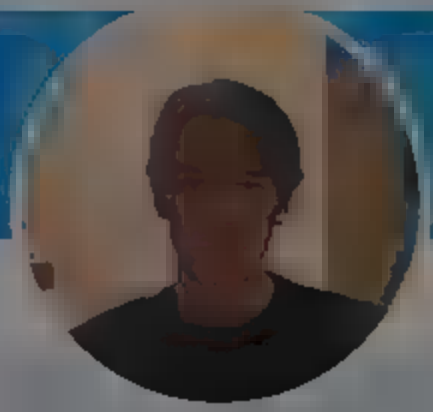
6 137 355

Yardley Yeadon @MichaelYeadon3 · 9 Std.
Liverpool LFT results show there is little virus in this national hotspot. Please consider that I might be right (I'm sure I am) that there isn't even an epidemic. Prob a few cases from endemicity, which isn't even a big public health issue LOCALLY. So why are we still 'locked...

4 157 397



Yardley Yeadon @MichaelYeadon3 · 9 Std.
...down'22 I have no idea. It cannot be anything to do with a virus. The jury is in:

May I ask what yours is?
Note, the option to “speedily roll-out a vaccine with proven efficacy & safety” isn’t available. Not yet. What you’ve heard recently is what’s called the 1st interim analysis.
I’m looking forward to seeing the actual efficacy data, reduction in illness.

I checked ONS yesterday, excess deaths at 56000, 44000 first lockdown so after that point 81 a day approx. But weirdly respiratory deaths down but dementia up by 23% along with many other diseases but no 5 yr comparison

Antwort an @duffy3663

The horrible data is high number of deaths at home. No exaggeration to say it's not a million miles from pre-NHS days.
I've seen narrative of someone dying unattended at home & the final cause of death determined to be appendicitis. In 21st century U.K. Terrible. Must stop it.

I don't doubt that some of these vaccines sound too good to be true. But I do doubt that they will kill more pensioners than they save.... I personally wouldn't want anyone under 60 to have it, unless they have serious medical issues that puts them at high risk from Covid.

1

Andy @AndrewJ27003381 · 19. Nov.
No one should be coerced into taking a DNA altering cocktail of poison. Do your research. This is ethically immoral!

2 3

Ian_Leeds_UK @ian_Leeds_UK · 19. Nov.
Not even someone in a care home that has had no family contact for 8 months?

No. It's illegal for good reasons. If you didn't know that, or why it's illegal, I respectfully suggest you explore why this is.

What if it kills more pensioners than it saves? This group has a high comorbidity rate. The vax companies have NO liability thanks to our government. This does not assure people of its long term safety.

1 7

Ian_Leeds_UK @ian_Leeds_UK · 19. Nov.
Are you kidding? You honestly think a vaccine will kill more pensioners than Covid? 🤣🤣🤣🤣 Nobody has died from the hundreds of thousands of vaccine trial volunteers.... Just a few headaches...🤣🤣🤣

3 1

Andy @AndrewJ27003381 · 19. Nov.
Think you should check your figures. Anyway, google Dr Carrie Madef, she is a good benchmark for what is in the stuff or Dr Vernon Coleman(old man in a chair). Governments lie.Corporations sell there wares. Governments hold Corporations hands.

We do not know and will not know for quite some time, if it stops people dying, or stops the transmission as those are secondary endpoints.

1 1

Ian_Leeds_UK @ian_Leeds_UK · 19. Nov.
What's your plan then?

2

Yardley Yeadon @MichaelYeadon3 · 13 Std.
May I ask what yours is?
Note, the option to "speedily roll-out a vaccine with proven efficacy & safety" isn't available. Not yet. What you've heard recently is what's called the 1st interim analysis.
I'm looking forward to seeing the actual efficacy data, reduction in illness.

1 5

Ian_Leeds_UK @ian_Leeds_UK · 13 Std.
3 tweets ago. Give it to all the over 75's (preferably the Oxford vaccine) I'm sure the vast majority of over 75's (both my parents are in this group) would happily risk a few side effects to get back to some kind of normality. And reduce chance of death. I would.

The very bad news is: they're not going to do anything because they've no power. None of them can speak to Hancock or the PM. Their calculus is Dec 2nd is a lost cause (because Labour wouldn't put Boris out if he was on fire) but maybe they can have a crack in mid-January.

I don't know if it's within the Act or separate, but they've kept going OFCOMs Coronavirus Broadcasting Guidelines, which has the effect of censorship on TV, broadcast radio & newspapers. This is why you've rarely heard any alternative viewpoints this whole year.

The very bad news is: they're not going to do anything because they've no power. None of them can speak to Hancock or the PM. Their calculus is Dec 2nd is a lost cause (because Labour wouldn't put Boris out if he was on fire) but maybe they can have a crack in mid-January.

43 147 765

Yardley Yeadon @MichaelYeadon3 · 2 Std.
I'm appalled. It's taken months but having persuaded a number, I can't tell you how crestfallen I am that it makes no difference. I was speaking a few days ago to another politician, saying "I'm concerned we're sliding into totalitarianism". Their reply: "We're already there".

Abstract

Many unknowns exist about human immune responses to the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) virus. SARS-CoV-2-reactive $CD4^+$ T cells have been reported in unexposed individuals, suggesting preexisting cross-reactive T cell memory in 20 to 50% of people. However, the source of those T cells has been speculative. Using human blood samples derived before the SARS-CoV-2 virus was

responses to the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) virus. SARS-CoV-2-reactive CD4+ T cells have been reported in unexposed individuals, suggesting preexisting cross-reactive T cell memory in 20 to 50% of people. However, the source of those T cells has been speculative. Using human blood samples derived before the SARS-CoV-2 virus was discovered in 2019, we mapped 142 T cell epitopes across the SARS-CoV-2 genome to facilitate precise interrogation of the SARS-CoV-2-specific

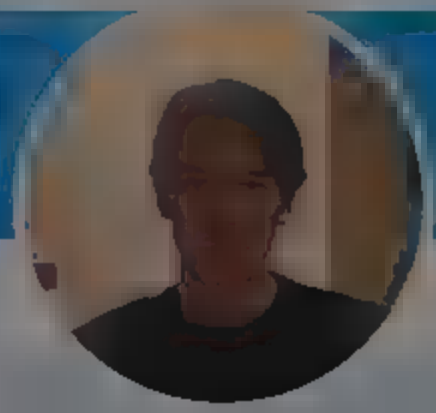
We demonstrate a range of preexisting memory CD4+ T cells that are cross-reactive with comparable affinity to SARS-CoV-2 and the common cold coronaviruses human coronavirus (HCoV)-OC43, HCoV-229E, HCoV-NL63, and HCoV-HKU1.



10 papers now & I assess pre-immunity in ~50% of people.

That's just appalling scaremongering for which there's no evidence at all.
If you've evidence, cite it now, please.
The headline is more than 6mo old & is unrelated to your assertion.

I still don't think your post should be censored. Dark times accompany censorship.

It takes courage to show your smile in a sea of masks. It takes dedication to form your opinion based on all the available data. It takes resilience to keep fighting for your beliefs when everyone is against you. I have the utmost respect for anyone who falls into this category.

So what you mean is the empty "testing centres" were always meant to be the vaccine centres in disguise

Matt Hancock @MattHancock

The NHS is establishing vaccination centres across the UK - ready to roll out a vaccine, if approved, from next month.

A plausible reason for apparent loss of 'flu is that physicians aren't testing for it. If there's a possible covid19 case, they'll test for that, perhaps 2-3x. If still negative, it's too late to test for 'flu, for which the testing window is, I'm told, short.

Mark Stronge @markoftec · 1 Std.
It's incredible Mike, it covers so much. It would be really great if you could have a paper that covers everything that is covered in the video with links to research, evidence as having 100 chrome tabs open all the time with various articles is tiring :)

I do know the feeling!
I have three devices with near max tabs for same reason.
I was never great at keeping references. I would just remember what I'd seen. The problem arose when drafting manuscripts!

Hello everyone. If you've not yet seen our exciting film (by @alexmaccaroon) I highly recommend it.
In a couple of places I'd slightly tweak some of the relative quantities but not the overall position.
If you like it, please retweet & share on other platforms. Youtube perhaps!

Unlocked 🔑 @Unlocked_UK_
Big thank you to everyone sharing our #YeadonUnlocked film. YouTube feel it doesn't meet current Government restrictions on content & removed it, but you can watch here
